**Electric Motors**

An electric motor is a device converting electrical energy into mechanical energy (usually a torque). This conversion is usually obtained through the generation of a magnetic field by means of a current flowing into one or more coils.

An electric motor turns because of magnetic force exerted between a stationary electromagnet called the stator and a rotating electromagnet called the rotor. Different types of electric motors are distinguished by how electric current is supplied to the moving rotor.

Tremendous technological advancements and the need for high efficiency motors are the two factors responsible for the growth of electric motors market in the past few years. Electric motors are widely used in motor vehicles, household appliances, material handling equipment, etc. An

unmitigated increase in fuel prices coupled with the need to reduce air pollution has led to an increased preference for electric vehicles in several countries. This, in turn, is expected to upsurge the electric motor market. Premium efficiency motors are expected to gain traction in near future as they are low maintenance, consume low power and have many other unique features as well.

**Discontinuous Sandwich Panel**

A sandwich panel is any structure made of three layers: a low-density core and a thin skin-layer bonded to each side. Sandwich panels are used in applications where a combination of high structural rigidity and low weight is required. SIP is a sandwich structured composite, consisting of an insulating layer of rigid core sandwiched between two layers of structural board, used as a building material. The board can be sheet metal, plywood, cement, magnesium oxide board (MgO) or oriented strand board (OSB) and the core either expanded polystyrene foam (EPS), extruded polystyrene foam (XPS), polyisocyanurate foam, polyurethane foam or composite honeycomb (HSC).

The market for Sandwich Panel is developing at an excellent pace. The APAC region dominates the market considerably with its fast growing market trajectory worldwide. It will expand at an admirable CAGR over the forecast period. The region will also probably show rapid industrial growth due to increased level of investments in the regions of China and India, where the construction sector is growing. This has further widened the scope of sandwich panels market in the region. North America is expected to grow rapidly by 2021. **Iodised Salt**

Iodised salt is produced by iodising common salt. Iodine plays an important role in our body-system, as it is utilised by the thyroid gland for the synthesis of thyroxine, which is a hormone essential for the growth and developmental activities. Deficiency of Iodine in the body results in the impairment of synthesis of thyroxine, leading to reduced blood circulating levels. The only iodising agent so far approved for table salt is potassium iodide. It is present at a concentration of (0.01%).

The demand of Iodised salt is more than 60 lakh tonnes per year as per the Ministry of Health Survey. To meet this requirement, more production capacities are required. Further due to many parts of our country are deficient in Iodine, Ministry of Industry has started crash programme to Iodise the common salt to check the problem of goitre; deafness, physical deforming and mental retardation. **Glass Sheet**

**G**lass is a transparent material, particularly in the visible region of electromagnetic spectrum. The transparent and colouration have made the glasses best suitable for decorative and illumination purposes in the early days of their invention. Glass is a non-crystalline solid. This means that the regular periodic arrangement of motifs (groups of atoms, molecules or ions) is absent in glasses. The crystalline characteristic of long-range order of motifs is lacked and short-range order prevails in glassy materials. Glasses are formed by quenching a material in liquid state sufficiently fast so that atoms cannot re-arrange themselves in a crystalline form and form glasses.

Glass sheets and plate glass can be clear or transparent, or treated with other elements to give an opalescent or iridescent quality. Which facilitates the development of new technologies and ensure a high quality product. Resistant glass is made by using layers of glass sheets or by using a transparent polycarbonate thermoplastic. Dichroic glass is glass that has been layered with metal oxides to give the glass a unique color and texture. Tempered glass is stronger and more durable than regular glass sheets and plate glass. It is used in a wide variety of products, including vehicle windows and specialty items like scuba diving equipment, marine vehicles, and some cookware. Tempered glass is made by heating and then rapidly cooling the glass to induce residual compressive stresses in the surface of the glass.

The pulses are used for preparing hot dishes, sweet dishes and other varieties. Pulses are the important sources of proteins, vitamins and minerals and are popularly known as "Poor man's meat" and "rich man's vegetable", contribute significantly to the nutritional security of the country. India is the largest producer (25% of global production), consumer (27% of world consumption) and importer (14%) of pulses in the world.

The dal milling industry in India is one of the major agro processing industries in the country. From an annual production of 13.19 million tonnes of pulse in the country, 75% of these pulses are processed by dal mills. Thus, due to demand it is a good project for entrepreneurs to invest.

**Porcelain Insulator**

**E**lectricity play a vital role in the development and growth of Agriculture and Industry, as it is a high priority item for all the developing or developed nations. For the generation and distribution of Electricity, High Tension Insulators are an important adjuncts.

Insulators have very few free electrons and do not transfer electrical energy well. An electrical insulator is a material whose internal electric charges do not flow freely, and therefore make it nearly impossible to conduct an electric current under the influence of an electric field. This contrasts with other materials, semiconductors and conductors, which conduct electric current more easily. The property that distinguishes an insulator is its resistivity; insulators have higher resistivity than semiconductors or conductors. The end type insulator is used on all distribution lines and on low voltage transmission lines.

World is experiencing a tremendous expansion of industrial and real estate sectors and accompanied by a massive

**Automobile Hoses**

Hose design is based on a combination of application and performance. Common factors are size, pressure rating, weight, length, straight hose or coil hose, and chemical compatibility. Hoses are made from one or a combination of many different materials. Applications mostly use nylon, polyurethane, polyethylene, PVC, or synthetic or natural rubbers, based on the environment and pressure rating needed. In recent years, hoses can also be manufactured from special grades of polyethylene (LDPE and especially LLDPE).

India is also a prominent auto exporter and has strong export growth expectations for the near future. Government of India and the major automobile players in the Indian market are expected to make India a leader in the 2W and Four Wheeler (4W) market in the world by 2020. The Indian automotive aftermarket is estimated to grow at around 10-15 per cent to reach US\$ 16.5 billion by 2021 from around US\$ 7 billion in 2016. ## Hydraulic Hose with Clamping

A hose is a flexible hollow tube designed to carry fluids from one location to another. Hoses are also sometimes called pipes (the word pipe usually refers to a rigid tube, whereas a hose is usually a flexible one), or more generally tubing. The shape of a hose is usually cylindrical (having a circular cross section). Hose design is based on a combination of application and performance. Common factors are size, pressure rating, weight, length, straight hose or coilhose, and chemical compatibility.

Hoses are made from one or a combination of many different materials. Applications mostly use nylon, polyurethane, polyethylene, PVC, or synthetic or natural rubbers etc.

Development in rubber and plastic technology led to substantial growth of hose pipe and almost all the hose pipe manufactured has components of rubber and plastic. Demand for hose pipe is on rise in almost all the sectors. India has the second largest consumer base in the world. Increased demand for goods has led to mechanization which has promoted the use of all types of machines including hydraulic machineries. The resultant effect on the global market for hydraulic rubber hoses is a CAGR of 4.2% from 2014 to 2022. This market is expected to be valued at US\$779.8 mn by the end of 2016 and US\$1 bn by 2022. whole you can invest in this project without risk and earn profit.

## Cold Water Starch

Cold water starch is a modified starch used to stiffen textile and other related fabric. It is simply used in cold (room temperature) water or directly on the material to be treated. Cold water starch is used to stiffen clothes and fabrics. It is used in cold water at room temperature on the fabric to be treated. Cold water starch is easy to use; it does not require boiling water to prepare

it, this has made it a darling to starch users and launderers.

The demand for starches and derivatives looks very promising in India as all the major user segments of starches and derivatives are showing near double digit growth in their production. It is also one of the largest contributors to India's exports with approximately 11 percent of total exports. The Indian textile industry, currently valued at around INR 7265 bn (\$110 bn), is expected to reach \$225 bn by 2021. Global Modified Starch Market was valued at \$7,995 million in 2016, and is projected to reach at \$10,700 million by 2023, growing at a CAGR of 4.2% from 2017 to 2023. As a whole entrepreneur can venture in this field will be successful.

## Pearl Caustic Soda

Caustic soda (sodium hydroxide or NaOH) is most commonly manufactured by the electrolysis of a sodium chloride (NaCl) solution. Manufacture caustic soda using either membrane or diaphragm electrolytic cells. NaOH, also known as lye and caustic soda, is a caustic metallic base. Pure sodium hydroxide is a white solid available in pellets, laves, granules, and as a 50% saturated solution.

The chemical industry in the country has not received its fair share of development due mainly to the fact that establishing an industry in this sub-sector of the economy is relatively capital intensive. In this brief write-up the need, technical feasibility and profitability of establishing a small plant to produce

**Cheese Analogues**

**C**heese analogues (more widely known as cheese alternatives) are products used as culinary replacements for cheese. These include vegan cheeses as well as some dairy products, such as processed cheese or Kraft Singles that do not qualify as true cheeses. Cheese analogues used especially for pizza are produced by using rennet casein, acid casein, vegetable oil mixtures and other functional additive substances. A typical MCA formulation is determined as casein and caseinates 18-24%, vegetable oil 22-28%, starch 0-3%, ES 0.5-2, sweeteners and flavorants 0.5-3%, stabilizer 0-0.5%, acidifiers 0.2-0.36%, colourants 0.04%, preservatives 0.10% and water content 45-55%.

Cheese Analogues market is currently experiencing a growth in demand due to need of reduction in prices of cheese production. Cheese analogues are produced with the help of different types of methods and production techniques. Cheese analogue's produced with the help of individual constituent, soya oil and casein etc. are cheaper alternatives for milk dry matter. In India, a successful attempt has been made in developing MCA based on acid casein and vegetable oil/fat blend taking help of emulsifying salts and rennet casein and speciality fat. As a whole you can invest in this project without risk and earn profit.

and isopropylacetone. While it is usually in liquid form, MIBK can change into a gas. MIBK will dissolve in water, alcohols, benzenes and ethers.

Methyl isobutyl ketone (MIBK) [CAS registry number: 108-10-1] is an organic compound with the formula (CH<sub>3</sub>)<sub>2</sub>CHCH<sub>2</sub>C(O)CH<sub>3</sub>. This colorless liquid, a ketone, is widely used as a solvent. MIBK is a colorless liquid with a characteristic ketone odor.
