## The Complete Book on Jute & Coir Products (with Cultivation & Processing) 2nd Revised Edition

₹1575/- \$150-

Jute is a natural fiber popularly known as the golden fiber. It has gained its name as olden fibre due to its shiny brown colour. The fibre is affordable to all the consumers and is completely biodegradable. It is one of the cheapest and the strongest of all natural fibers and considered as fiber of the future. Jute is second only to cotton in world's production of textile fibers. Jute fibers are composed primarily of the plant materials cellulose and lignin. Jute is the name of the plant or fiber used to make burlap, hessian or gunny cloth.

Coir is a versatile natural fibre extracted from mesocarp tissue, or husk of the coconut fruit. Generally fibre is of golden color when cleaned after removing from coconut husk; and hence the name "The Golden Fibre".

Both coir and jute are natural fibers and come from sustainable products. Coir comes from the husks of coconuts that were typically discarded. It is harvested by hand and soaked in water to soften the fibers, which are then woven together. Jute fiber comes from the stem of the jute plant and is the second most important vegetable fiber, after cotton, when it comes to production and use.

The growing demand for eco-friendly products in the market is where coir should fast step in. It is a lightweight, soilless growing medium made from the fibers which completely renewable and considered an excellent choice for environmental sustainability. The efforts support the market expansion for coir and the Asia Pacific hopes to further increase

production by streamlining the fiber collection process to meet demand.

The Major contents of the Book are BIS Specifications, Jute: an eco-friendly opportunity for a sustainable Future, Green Marketing Of Jute and Jute Products, The Jute And Jute Textiles Industry, Jute Cultivation, Potentiality of coir for salient application, Coconut Cultivation, Scheme for the Development of Coir Production Line, Step-by Step approach to start a Coir Industry, Coir Geotextiles, Eco-friendly and natural image of coir, Jute Yarn, Sutli & Hessian Cloth, Jute Twine (Jute Rope), Gunny Bags, Jute Garments, Jute Shopping Bags, Gunny Bags (Jute Bags) Manufacturing, Handmade Paper from Jute, Environment Pollution and Effluent Treatment of Jute, Coir Fibre, Coir Pith, Biomass Charcoal Briquetting from Jute and Coir Waste, Rubberized Coir Mattresses, Coir Pith for Absorption and Recovery of Oil from Contaminated Sites, Application of Coir in Agricultural Textiles, Manufacture of Coir Corrugated Roofing Sheet, Coir Machinery Manufacturers, Plant Layout & Process Flow Sheet and Machinery, Equipment and Product Photograph.

A total guide to manufacturing and entrepreneurial success in one of today's Jute & Coir Products industry. This book is one-stop guide to one of the fastest growing sectors of the Jute & Coir Products industry, where opportunities abound for manufacturers, retailers, and entrepreneurs. This is the only complete handbook on the commercial production of Jute & Coir Products. It serves up a feast of how-to information, from concept to purchasing equipment.

**IV Set**

Intravenous therapy delivers liquid substances directly to the veins. Intravenous route is the fastest way to deliver medications or fluid replacement substances into the body via veins. IV administration sets are accessories required to deliver fluids to patients to treat various conditions such as dehydration, electrolyte imbalance, and other conditions requiring specialized Parenteral drug therapies. The rate of delivery of liquid can be adjusted with a roller clamp of an IV administration set. Primary IV administration set is either a macro-drip solution administration set that delivers 10, 15, 20 gts/ml, or micro-drip set which delivers small amount of fluid over longer period of time.

The total India infusion therapy market is growing at a rate of 5.7%, which will take the 2017 market value of \$387.8 million up to \$572.6 million by 2024.

**Freeze Dried Fruits & Vegetables (Dry Banana, Mango, Custurd Apple, Beetroot, Sapota, Dragon Fruit, Jamun and Green Peas)**

Freeze-drying, technically known as Lyophilization, is a process of sublimation where water molecules in a solid phase are directly converted to vapor phase. Since Lyophilization is the most complex and expensive form of dehydration, its use is usually restricted

to delicate and heat-sensitive high value materials.

Global Freeze Dried Fruits and Vegetables Market is expected to surpass USD 60 billion by 2025. Increasing popularity of packaged food will be a major factor behind the freeze dried fruits and vegetables market growth. The product is extensively used in preparing many packaged food items such as soups, juices, ready-to-eat meals, etc. The advantages of the product over fresh fruits and vegetables will augment the industry growth in the forecast years. Thus, due to demand it is best to invest in this project.

**GI Metal Sheet Products Octagonal, Square, Rectangle Poles**

Utility poles are commonly used to carry two types of electric power lines: distribution lines (or "feeders") and sub transmission lines. Distribution lines carry power from local substations to customers. They generally carry voltages from 4.6 to 33 kilovolts (kV) for distances up to 30 miles, and include transformers to step the voltage down from the primary voltage to the lower secondary voltage used by the customer. A service drop carries this lower voltage to the customer's premises.

Global electricity transmission poles market was valued at US\$6.386 billion in 2019 and is expected to grow at a CAGR of 6.83% over the forecast period to reach a total market size of US\$9.495 billion in 2025. Electricity poles, also called power poles, support wires and electric cables that carry electricity from power companies to end users. Materials that are used in the production of electricity transmission poles include wood, steel, and composite. The choice of material depends on its use which determines the life span of the electricity transmission pole. Electricity transmission poles are used to support and carry electrical lines, distribution lines, and sub-transmission lines. As a whole any entrepreneur can venture in this project without risk and earn profit.

## Steel Billets and TMT Steel Bars (Rebar) from Scrap Metal

Most of the steel generally in civil and allied work used is the plain carbon and mild steel and the largest portion of carbon steels used, has tensile strengths not greater than 36 to 40 t/in.2. The carbon content in the steel predominantly governs the steel properties. 0.40% carbon steel is of great importance due to its being economical to meet general requirement and having reasonably high strength and other properties, like yield point, elongation and reduction percentages etc.

The long steel market size is estimated to be USD 527.0 billion in 2020 and projected to reach USD 636.7 billion by 2025, at a CAGR of 3.9% from 2020 to 2025. Increasing construction and infrastructure activities, rising population levels, and industrialization are the major factors responsible for the growth of the long steel market. However, the recent outbreak of Covid-19 is expected to have a severe impact on the long steel market. This facilitates the development of new technologies and ensures a high quality product.

## Bamboo Toothbrush

The toothbrush is an oral hygiene instrument used to clean the teeth, gums, and tongue. It consists of a head of tightly clustered bristle, atop of which toothpaste can be applied, mounted on a handle which facilitates the cleaning of hard-to-reach areas of the mouth. They are usually used alongside floss. They are available with different bristle textures, sizes, and forms. Most dentists recommend using a soft toothbrush since hard-bristled toothbrushes can damage tooth enamel and irritate the gums.

The Global Bamboo Toothbrush Market is expected to register a CAGR of 7% to reach USD842.1 million by 2024. Bamboo toothbrushes are an eco-friendly alternative to plastic toothbrushes. Bamboo has several characteristics that make it an ideal substitute for plastic. It is cost-effective, has anti-microbial properties, can be grown in a wide variety of landscapes, and is easy to manipulate to make objects. Bamboo toothbrushes naturally ward off microbial growth and can be discarded without causing any harm to the environment. Entrepreneurs who invest in this project will be successful.

## Polylactic Acid (PLA)

Poly-lactic acid (PLA) is a rigid thermoplastic polymer that can be semi-crystalline or totally amorphous, depending on the stereo-purity of the polymer backbone. L(-)-lactic acid (2-hydroxy propionic acid) is the natural and most common form of the acid, but D(L)-lactic acid can also be produced by microorgan-

isms or through racemization and this "impurity" acts much like co monomers in other polymers such as polyethylene terephthalate (PET) or polyethylene (PE). In PET, diethylene glycol or isophthalic acid is copolymerized into the backbone at low levels (1-10%) to control the rate of crystallization.

The global poly-lactic acid (PLA) market was valued around US\$ 2.23 Bn in 2017 and is anticipated to expand at a stable CAGR above 20.5% during the forecast period 2018 to 2026. According to the "Polylactic Acid (PLA) Market-Global Industry Analysis, Size, Share, Growth, Trends and Forecast, 2018-2026". Growing application in the cosmetics and personal care industry, ongoing advancements in science and technology, increasing consumer awareness and government incentives are some of the fundamental factors that are driving the global polylactic acid (PLA) market growth globally.

### Hot Dip Galvanizing

Hot Dip Galvanizing is a process in which an adherent, protective coating of zinc and zinc compounds is developed on the surfaces of iron and steel products by immersing them in a bath of molten zinc. Hot dipping is a process in which a metal substrate is immersed in a molten bath of a second metal. After removal, the second metal is coated into the first. It is essential to have higher melting temperature of first metal than the second. The most common substrate metals are steel and iron and the common coating materials are zinc, aluminium, tin and lead. Prior to coating, cleaning of rust, scale, oil, paint and other surface contaminants is required.

Steel manufacturing output of India is expected to increase from 88.4 million tons (MT) in 2017 to 128.6 MT by 2021, accelerating the country's share of global steel production from 5.4% in 2017 to 7.7% by 2021. India is the second-largest crude steel producer in the world. In FY17, India produced 111.254 million tons (MT) of finished steel. Total finished steel production in the country increased at a CAGR of 8.39 per cent over FY12-17. Crude Steel and Finished Steel production during April-October 2017 stood at 66.70 MT and 76.36 MT, respectively. Thus, due to demand it is best to invest in this project.

## Red Iron Oxide (with Mining of Mineral Ore along with Processing and Beneficiation)

Iron (III) oxide or ferric oxide is the inorganic compound with the formula  $\text{Fe}_2\text{O}_3$ . It is one of the three main oxides of iron, the other two being iron (II) oxide ( $\text{FeO}$ ), which is rare; and iron (II,III) oxide  $\text{Fe}_3\text{O}_4$ , which also occurs naturally as the mineral magnetite. As the mineral known

as hematite,  $\text{Fe}_2\text{O}_3$  is the main source of iron for the steel industry.  $\text{Fe}_2\text{O}_3$  is readily attacked by acids. Iron (III) oxide is often called rust, and to some extent this label is useful, because rust

shares several properties and has a similar composition. To a chemist, rust is considered an ill-defined material, described as hydrated ferric oxide.

The Indian government has allocated USD 63 billion for the infrastructure sector in 2019-20 and is planning to spend USD 1.4 trillion over the next five years. **Porcelain Insulator**

Electricity play a vital role in the development and growth of Agriculture and Industry, as it is a high priority item for all the developing or developed nations. For the generation and distribution of Electricity, High Tension Insulators are an important adjust.

Insulators have very few free electrons and do not transfer electrical energy well. An electrical insulator is a material whose internal electric charges do not flow freely, and therefore make it nearly impossible to conduct an electric current under the influence of an electric field. This contrasts with other materials, semiconductors and conductors, which conduct electric current more easily. The property that distinguishes an insulator is its resistivity; insulators have higher resistivity than semiconductors or conductors.

The end type insulator is used on all distribution lines and on low voltage transmission lines.

## Goat Rearing & Breeding

**G**oats, one of the world's smallest domesticated livestock, have been actively managed for food and fiber earlier and longer than cattle and sheep. India possesses the largest goat population and ranks first in the world. In the prevailing socio-economic conditions in India where per capita holding is hardly 0.2 ha, goat rearing becomes an inseparable counterpart of mixed farming system. Goat rearing has been recommended as the best choice for the rural people in developing countries because of their wider adaptability, low investment, high fertility and fecundity, low feed and management needs, high feed conversion efficiency, quick pay off and low risk involved.

The goat is multipurpose animal to provide milk, meat, hair (fur) and manure for soil. The world population of goats is approximately 860 million, of which 94% are found in the developing countries. Africa and Asia account for about 81% of the total population in the developing countries, including a bewildering variety of breeds. Goat rearing is the backbone of economy of small and landless farmers in India. It is an insurance against crop failure and provides alternate source of livelihood to farmers all the year round. Goats play an important role in income generation, capital storage, employment generation and improving household nutrition. As a whole it is a good project for entrepreneurs to invest.
