Introduction

Sodium hypochlorite (NaOCl) is inorganic compound that contains sodium ions, hypochlorite ions, and chlorine atoms. In its pure form, it is an amber-colored liquid and has a pungent odor slightly resembling chlorine gas, from which it derives its name. It has the chemical formula NaOCl or (NaClO) . Sodium hypochlorite can be easily decomposed by heating to produce sodium chloride and sodium chlorate.

Uses of Sodium Hypochlorite

The use of sodium hypochlorite in common household bleach is one of its most well-known uses, but there are also many other applications for sodium hypochlorite. Water treatment plants have been using sodium hypochlorite to disinfect water. It is also used as an industrial bleaching agent in paper mills, textile manufacturing and to remove heavy metals from waste products. In addition, sodium hypochlorite can be used as a preservative for food or as an ingredient in toothpaste and mouthwash.

Manufacturing Process

Sodium hypochlorite is usually manufactured in a continuous process that involves three stages: chlorination, neutralization and dilution. In chlorination stage, NaCl is mixed with HOCl or HOCl to produce NaOCl or NaOCl respectively. The reaction occurs at high temperature (above 100 °C) and pressure (1-2 bar). The reaction rate depends on chlorine gas concentration and its contact time with salt solution. It takes about 1 hour for 90% of NaCl to react completely at normal pressure.

Machinery Photographs

In neutralization stage, excess HCl from chlorination stage is removed by adding caustic soda (NaOH) which reacts with HCl to form water and salt. This step also produces heat that needs to be removed for maintaining reaction temperature at desired level. In dilution stage, NaOCl or NaOCl produced in previous stages are mixed with water at high temperature (~80 °C). The mixture is then cooled down to room temperature where it becomes household bleach.

Benefits of Starting Sodium Hypochlorite Manufacturing Business

Sodium hypochlorite manufacturing business has wide spread application and hence it is in great demand all over. Business of manufacturing and supplying best quality chemicals like, sulphonic acid and carbon dioxide (daguerreotype) can be a successful business proposition in today's global scenario. The growing industries are requiring large quantities of sodium hypochlorite manufacturing business to ensure their optimum functioning.

The raw material required for manufacturing these chemicals are available at very reasonable rates in India as compared to other countries, thus making Indian manufacturers more competitive than others. This factor makes Indian manufacturers to export these products at cheaper rates which further increases their market share globally. Also there is no need of any specific kind of training or skills to start sodium hypochlorite manufacturing business. It only requires basic knowledge about its usage and safety measures.

Global Market Size

The sodium hypochlorite market was valued at \$266.0 million in 2020, and is projected to reach \$422.5 million by 2030, growing at a CAGR of 4.7% from 2021 to 2030. Global market outlook Owing to rapid urbanization and industrialization, particularly in the emerging nations such as India, the demand from the wastewater chemical treatment industry has been witnessed to increase significantly, which notably contributes toward the growth of the sodium hypochlorite market.

Furthermore, rise in awareness about the need for regular and proper disinfection of office spaces, public restrooms, malls, and complexes is fueling demand for sodium hypochlorite, thus propelling the market growth.
