Market Overview of Algeria

Algerian economy has grown at an average rate of 7.8% per year, faster than any other Arab country. It is characterized by rapidly increasing capital formation, strong exports growth, high level of human development and high standard of living. The largest share of contribution to GDP comes from services sector (68%) followed by industry (27%). Primary sector only contributes 3%. Over 90% of Algerians are employed in service sector, while less than 5% are employed in agriculture sector.

Labor force consists mainly of women (60%), because men migrate for work mostly to Europe. High oil prices helped fuel that earlier economic expansion and drove increases in public spending and inflation. Inflation spiked following sharp fluctuations in world energy markets in recent years, including declines in oil prices—Algeria’s main export. To help insulate itself from such market swings, Algeria will need to continue diversifying its sources of foreign exchange earnings and encouraging non-hydrocarbon exports

Hydrocarbons remain central to Algeria's economic well-being: Oil and gas account for almost 80% of government revenues and about half of GDP (and virtually all export earnings). Oil production is expected to stabilize at around 1.5 million barrels per day over 2017–18, falling short of target due to infrastructure constraints and disruptions caused by security concerns since mid-2014. Crude oil is exported via pipeline to Spain, where most Algerian natural gas also is shipped. Gas consumption in Algeria has been growing fast as infrastructure expands; it now accounts for roughly one quarter of total use in North Africa.
