# Introduction

Medical and surgical device manufacturers worldwide produce a multitude of items that are intended for one use only. The primary reason is infection control; when an item is used only once it cannot transmit infectious agents to subsequent patients. Like medicines and other health technologies, they are essential for patient care – at the bedside, at the rural health clinic or at the large, specialized hospital.

**Surgical gloves also known as Medical gloves. These gloves are medical safety accessories that ensure sanitary hospital conditions by limiting patients' exposure to infectious matter. They also serve to protect health professionals from disease through contact with body fluids. Medical gloves are traditionally made of latex and powdered with cornstarch. Since cornstarch can impede healing if it gets into tissues (as during surgery), non-powdered gloves are being increasingly used during surgery and other sensitive procedures.**

**Latex Surgical Gloves are highly flexible and comfortable to wear. Over the years, the demand for our Latex Surgical Gloves has increased consistently in the national market. Latex surgical gloves are made from natural rubber latex which provide excellent tactile sensitivity and comfort. Latex material is known to have very high elasticity meaning the gloves can stretch well to allow easy donning.**

**There are about 200 latex gloves manufacturers in India in small and medium scale sectors.**

**The demand for surgical gloves is influenced by several related factors. As the surgical gloves are consumed by surgeons during surgeries, the demand is influenced by the following factors: -**

- Prevalence of diseases requiring surgery**
- Development in health care, hospital facilities and operation theatres.**
- Medical education and growth of surgeons in society.**

**The demand goes up when medical facilities, number of surgeons and surgeries taken place show improvement.**

**The main factors that drive the medical drive market is the growing awareness of health and safety measures that have to be employed in order to stop spread of diseases. Patients and health medics have recognized the increasing need for gloves globally. The healthcare and the medical industry is growing at a fast rate thus increasing the growth of surgical gloves market as it is the staple product required in this industry.**

Surgical gloves may be disposable, but in the operating room they are indispensable. Despite lingering effects of a down economy and declining medical equipment and supply sales, the market for surgical gloves continues to grow.

There exists immense opportunities for growth in the global surgical latex gloves market the fact that dozens of pairs of medical gloves are utilized in a single day in hospitals and laboratorial settings, and the inherent intrinsic indispensability of the product among surgeons, practitioners, and healthcare workers.
