Petroleum & Petroleum Products Technology Handbook

(Thermal Cracking of Pure Saturated Hydrocarbons, Petroleum Asphalts, Refinery Products, Blending and Compounding, Oil Refining and Residual Fuel Oils)

Petroleum asphalt is a sticky, black and highly viscous liquid or semi-solid that is present in most petroleum crude oils and in some natural deposits. Petroleum crude oil is a complex mixture of a great many different hydrocarbons. Refined petroleum products are derived from crude oils through processes such as catalytic cracking and fractional distillation. Refining is a necessary step before oil can be burned as fuel or used to create end products.

Residual fuel oil is a complex mixture of hydrocarbons prepared by blending a residuum component with a flux stock which is a distillate component diluent, to give the desired viscosity of the fuel oil produced. Petroleum refining is the process of separating the many compounds present in crude petroleum. An Oil refinery or petroleum refinery is an industrial process plant where crude oil is processed and refined into more useful products

The global Petroleum Asphalt market is valued at USD 48.8 Billion in 2017 and is expected to reach USD 77.67 Billion by the end of 2024, growing at a Growth Rate of 6.87% between 2017

and 2024. The global bunker fuel market was valued at \$137,215.5 million in 2017 and is expected to reach \$273,050.4 million by 2025, registering a CAGR of 9.4% from 2018 to 2025.

Some of the fundamentals of the book are composition of radiation effects on lubricants, thermal cracking of pure saturated hydrocarbons, petroleum asphalts, refinery products, refinery feedstock's, blending and compounding, oil refining, residual fuel oils, distillate heating oils, formulations of petroleum, photographs of machinery with suppliers contact details.

A total guide to manufacturing and entrepreneurial success in one of today's most lucrative petroleum industry. This book is one-stop guide to one of the fastest growing sectors of the petroleum industry, where opportunities abound for manufacturers, retailers, and entrepreneurs. This is the only complete handbook on the commercial production of petroleum products. It serves up a feast of how-to information, from concept to purchasing equipment.

Manufacturing of Petroleum Products

(Petroleum Waxes, Greases and Solid Lubricants, Solid Fuels, Gaseous Fuels, Gasoline, Diesel Fuel Oils, Automotive, Diesel and Aviation Fuels, Lubricating Oils and Lubricating Greases)

The petroleum waxes are semi refined or fully refined products obtained during the processing of crude oil. According to their structure they are divided into macrocrystalline waxes (paraffin waxes) and microcrystalline waxes (ceresine, petrolatum, others). Grease, thick, oily lubricant consisting of inedible lard, the rendered fat of waste animal parts, or a petroleum-derived or synthetic oil containing a thickening agent. Greases of mineral or synthetic origin consist of a thickening agent dispersed in a liquid lubricant such as petroleum oil or a synthetic fluid.

Diesel fuel, also called diesel oil, combustible liquid used as fuel for diesel engines, ordinarily obtained from fractions of crude oil that are less volatile than the fractions used in gasoline. Lubricating oil, sometimes simply called lubricant/lube, is a class of oils used to reduce the friction, heat, and wear between mechanical components that are in contact with each other. Lubricating oil is used in motorized vehicles, where it is known specifically as motor oil and transmission fluid.

The global wax market was valued at around USD 9 billion in 2017 and is expected to reach approximately USD 12 billion in 2024, growing at a CAGR of slightly above 3.5% between 2018 and 2024. The India lubricant market is expected to register a CAGR of 4.64%, during the forecast period, 2018-2023. The

major factors driving the growth of the market are the increasing vehicular production along with the growing industrial sector. The global market for lubricants is expected to reach USD 70.32 billion by 2020. The global grease market is expected to grow at a CAGR of 2.13% during the forecast period, 2018 - 2023. Aviation fuel market size will grow by over USD 34 billion during 2018-2022

Some of the fundamentals of the book are composition of the petroleum waxes, solvent extraction, greases and solid lubricants, solid fuels, other significant tests or properties, gaseous fuels, properties of waxes, gasoline, diesel fuel oils, automotive, diesel and aviation fuels, special processes for motor-fuel blending components, crude distillation, lubricating oils, lubricating greases, nature of lubricating oils, photographs of machinery with suppliers contact details

Biomass Pellets from Bio Waste

Energy is the key factor in economic development of country. As we approach the turn of century, our requirements of energy will increase rapidly and vastly. Though there are several alternative conventional as well as non-conventional energy sources have been developed, still world is facing energy crisis day by day and it will rise in the coming future with rapid increase in population as well as industrialization. Biomass should be termed not only as a potential renewable source of energy, but also as a renewable feedstock for chemicals, technologically, biomass can provide all the forms of energy and the products normally derived from fossil fuels.

Biomass is a resource that is present in a variety of different materials: wood, sawdust, cotton waste, paddy straw, seed waste, manure, paper waste, household waste, wastewater, etc. Biomass pellets are the most elaborate biofuel, and consist of small cylinders 6 to 10 mm in diameter and 10 to 30 mm in length that are obtained by pressing biofuels with binders, particles density obviously larger than what prior to compression that it may be up to 1.2~1.4g/cm3 with volume shrink 75% to 90%.

Modern bioenergy is being recognized as an increasingly important low-carbon resource by policy-makers around the world to meet climate policy targets. In India also, there is a clear recognition of the significant role of bioenergy in electricity generation as well as in other applications. Bioenergy (including traditional biomass) is the largest renewable energy source with 14% out of 18% renewable in the energy mix and supplies 10% of global energy supply. Most of this is consumed in developing countries for cooking and heating, using traditional cook stoves, with considerable impact on human health (indoor air pollution) and on the environment.

Condoms

A condom is a thin, fitted tube. Condoms prevent pregnancies and STDs. They create a barrier that keeps semen and other body fluids out of the vagina, rectum, or mouth. It is also called a rubber or the barrier method. Control of fertility continues to be an important issue through the world even though the population growth rate has shown a steady decline in many countries, partly owing to the extensive use of condoms (male) or with use of the oral contraceptives (female). Rubber condoms (male) are used by the majority of man today for enjoying the sexual inter course.

According to the All India Institute of Medical Sciences, there are four types of condoms in vogue:

- (a) Natural skin condoms: made from lamb intestine,

rarely used nowadays. It provides better sensation, but does not protect from infection. Most viruses can cross the natural membrane;

- (b) Latex condoms (0.3–0.8 mm thick)—sperms and organisms causing STIs cannot pass through

these condoms;

- (c) Polyurethane condoms: odourless, have greater sensitivity and resistance to deterioration from storage and lubricants; individuals with latex allergy can use polyurethane condoms;

- (d) Silicon rubber condom: thicker and less popular

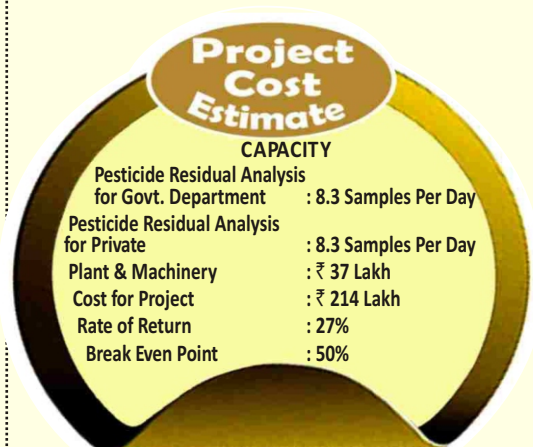

The use of condoms, conceived primarily as a tool for family planning to curtail population growth, has attained a primacy in arresting the spreading of the dreaded disease,

AIDS. Hindustan Latex, the pioneering government enterprise, had initiated moves to set up a packaging unit and a distribution centre at Dubai in view of demand from the markets in the Middle East and other African countries.

Pesticide Residual Analysis Laboratory

Consumer concerns on food safety and society awareness of chemical contaminants in the environment have increased in the past few years. As a consequence, more restrictions in the use of chemical products have been imposed at national and international levels. Pesticides are widely used for the control of weeds, diseases, and pests of cultivated plants all over the world, mainly since after Second World War, with the discovery of some organic compounds with good insecticide or herbicide activity. A pesticide is any substance or mixture of substances, natural or synthetic, formulated to control or repel any pest that competes with humans for food, destroys property, and spreads disease. The term pest includes insects, weeds, mammals, and microbes, among others. Pesticides are usually chemical substances, although they can be sometimes biological agents such as virus or bacteria.

India analytical instrument market stood at around \$ 2 billion in 2017 and is projected to grow at a CAGR of over 11% to surpass \$ 3.7 billion by 2023. Stringent environmental policies of Central Pollution Control Board such as 'Zero Liquid Discharge', which has further led to investments in river cleaning projects like "Namami Ganga" and "Clean Yamuna Project" are expected to fuel growth in India analytical instrument market in the coming years.

The significance of pesticides has been rising over the last few decades catalyzed by the requirement to enhance the overall agricultural production and the need to safeguard adequate food availability for the continuously growing population in the country. In India, pests and diseases, on an average eat away around 20-25% of the total food produced. The Indian pesticides market was worth INR 181 Billion in 2017. The market is further projected to reach INR 292.9 Billion by 2023, at a CAGR of 8.3% during 2018-2023. Pesticides are substances or a mixture of substances intended for preventing, destroying, repelling or mitigating any pest. Pesticides represent the last input in an agricultural operation and are applied for preventing the spoilage of crops from pests such as insects, fungi, weeds, etc., thereby increasing the agricultural productivity.

3 Star Hotel with 2 Banquet Hall & Restaurant

A hotel is an establishment that provides lodging paid on a short-term basis. Facilities provided may range from a modest-quality mattress in a small room to large suites with bigger, higher-quality beds, a dresser, a fridge and other kitchen facilities, upholstered chairs, a fat screen television and en-suite bathrooms. Full service hotels often contain upscale full-service facilities with a large number of full service accommodations, an on-site full service restaurant, and a variety of on-site amenities. Boutique hotels are smaller independent, non-branded hotels that often contain upscale facilities.

Hotels are found in almost all the cities. Hotels operate twenty-four hours a day, seven days a week. The principal factor that determines the guest attitude towards a hotel is service although other amenities such as room, food and beverages are of equal importance tangible determinants.

Over the last decade business opportunities in India had intensified and elevated room rates occupancy levels in India. Even budget hotels are charging USD 250 per day. 'Hotel Industry in India' success story is only second to China in Asia Pacific. The World Travel and Tourism Council, says that India ranks 18th in business travel and will be among the top 5 very soon. India's big success stories includes the new model for development and growth; a model that is uniquely made. One of the major reasons for the increase in demand for hotel rooms in the country is due to the boom of information technology, telecom, retail and real estate. India's increasing stock market and new business opportunities are

always been attractive foreign investors and corporate travelers to look for business opportunities in the country.

Sodium Silicate from Rice Husk Ash

Sodium Silicate is a colourless compound of oxides of sodium and silica. It has a range of chemical formula varying in sodium oxide (Na₂O) and silicon dioxide or silica (SiO₂) contents or ratios. Sodium silicate is the generic name for a series of compounds derived from soluble sodium silicate glasses. They are water solutions of sodium oxide (Na₂O) and silicon dioxide (SiO₂) combined in various ratios. Rice husk a major by-product of the rice milling industry, is one of the most commonly available lignocellulosic materials that can be converted to different types of fuels and chemical feedstocks through a variety of thermo chemical conversion processes. Rice husk is an agricultural residue abundantly available in rice producing countries.

The Global Sodium Silicate Market is expected to register a CAGR of 2.1% during the forecast period (2018-2023). The sodium silicate market is majorly driven by the growing demand from the North American region. Sodium silicate consumption is exhibiting a marginal growth rate in all application sectors. In addition to a variety of direct uses, such as detergents and pulp & paper, sodium silicate is consumed in the downstream production of derivative substances. An increase in demand for sodium silicate from applications like detergents, precipitated silica, construction, pulp & paper, water treatment, metal casting, and food preservation are some of the driving factors behind the growth of the global sodium silicate market. Additionally, rise in demand for environment-friendly binding agents in the construction industry and uptake of green tires in the automotive sector are expected to boost the growth in the global sodium silicate market during the forecast period.

The United States dominated the sodium silicate demand owing to the presence of several oil refineries, pulp & paper industries, and detergent manufacturing companies. The geographical advantage for the region with respect to the raw material availability is expected to have a positive impact on the industry in the United States.

Workshop for Motors of Low Voltage (Up-To 1000V) and Distribution Transformers (Maintenance, Overhauls and Repairs)

Maintenance of electrical equipment and the maintenance function in general, are key subjects today for managers of plants and facilities. One important reason for this interest is there are profound changes taking place in the area of maintenance and reliability management. Basically, sweeping changes in management and organizational structure are redefining how work gets done. Qualification and certification of electrical maintenance personnel are other factors that will become increasingly important. A number of electrical industry organizations got together recently and created a certification program for people involved in the installation and maintenance of instrumentation and control systems.

One of the major challenges to electrical maintenance is the nature of electrical wiring. It can be difficult to pinpoint the location of specific problems as the system is built into the building. Thermal imaging has become increasingly important in the industry for its ability to identify issues with both electrical connection points and equipment operation. By catching such problems early, electrical maintenance helps reduce unexpected power outages and protect equipment from damage.

The growing requirement to improve and maintain the reliability of the electrical distribution equipment at office spaces, manufacturing facilities, and industrial facilities is propelling the demand for the electrical distribution services, globally. The electrical services market's growth can also be attributed to the increasing focus on repair and maintenance of existing electrical equipment and fixtures across multiple industries. Fulfilling crucial parameters is critical to ensure the effective scheduling of electrical distribution equipment to avoid the operational downtimes.

Biodegradable Plastic Bags from Corn & Cassava Starch

Cassava starch or tapioca starch, a product extracted from fresh roots is one of the major commercial starches in the market. It is ranked as the second, after corn starch. The technology of starch production has been greatly improved from low quality starch produced by sedimentation process to high quality starch produced by fully automated and mechanized, dewatering centrifugal process. In this process, roots are transported to factories. Corn starch has 25% amylose and 75% amylopectin. The amylose molecules loose lose water increase biodegradation characteristic and amylopectin molecule is responsible for plasticizer properties. Their granule size ranges between 5 to 20 microns. i.e. good absorption capacity, rapid gel formation & good strength.

Starch is used to produce such diverse products as food, paper, textiles, adhesives, beverages, confectionery, packaging, pharmaceuticals, and building materials. Cassava starch has many remarkable characteristics, including high paste viscosity, high paste clarity, and high freeze-thaw stability, which are advantageous to many industries. Cassava starch could be used for making various types of packaging products. As a major source of starch in tropical and subtropical regions, cassava is a promising raw material for the development of biodegradable plastics in these areas.

Biodegradable Plastics Market by Type (PLA, PHA, PBS, Starch-Based Plastics, Regenerated Cellulose, PCL), by Application (Packaging, Fibers, Agriculture, Injection Molding, and Others)—Global Trends & Forecasts to 2020 says biodegradable plastics market is projected to be worth more than USD 3.4 billion by 2020 growing at around 10% CAGR. Plastics packaging is the most important application of biodegradable plastic and is projected to grow at a rapid pace. Injection molding is an emerging application which is expected to witness the fastest growth. The growth in

the market is also influenced by the increased environmental awareness and concerns among the general population in developing countries.

Glass Reinforced Concrete (GRC)

Glass Fiber Reinforced Concrete (GFRC) or (GRC) is a type of fiber reinforced concrete. GRC is a composite material consisting of a mortar of hydraulic cement and fine aggregate reinforced with alkali resistant glass fibres. The GRC is a form of concrete that uses fine sand, cement, polymer (usually an acrylic polymer), water, other admixtures and alkali-resistant glass fibers. The fibre contents are typically 3% to 5% by weight depending on product application and production method employed.

GRC is a family of composite materials that combine the high compressive strength properties of cement mortars with significantly increased impact, flexural and tensile strengths imparted by the fibre reinforcement. GRC products are safe, have good chemical resistance and will not rot or corrode. GRC is made of inorganic materials and will not burn, has negligible smoke emission and offers good fire resistance. GRC is normally of relatively thin cross section, giving a low component weight, which allows savings in handling, storage, transportation, and installation compared with traditional concrete products.

The GRC or GFRC market was valued at USD 1.83 Billion in 2017 and is projected to reach USD 3.32 Billion by 2023, at a CAGR of 10.5% during the forecast period. Increasing demand for fire & weather resistance, design flexibility, dimensional stability, ease of handling and rapid installation is driving the growth of the GFRC market. The

global glass fiber reinforced concrete market (GFRC) is likely to gain significant momentum in the coming years, owing to the rising concerns about environment conservation. GFRC is produced using recycled and low toxicity raw materials including glass fibers, sand, cement, and water. They offer superior mechanical characteristics as compared to

traditional building materials such as steel reinforced concrete (SRC).

PVC Wires and Cables

An electrical cable is an assembly of one or more wires running side by side or bundled, which is used to carry electric current. A power cable is an electrical cable, an assembly of one or more electrical conductors, usually held together with an overall sheath. The assembly is used for transmission of electrical power. Power cables may be installed as permanent wiring within buildings, buried in the ground, run overhead, or exposed. Flexible power cables are used for portable devices, mobile tools and machinery.

Bangladesh's cable market is growing at 15-20 percent a year thanks to the expansion of power gridlines as the govern-

ment looks to provide electricity for all by 2021. In 2017, the cable manufacturing industry was worth about Tk 6,000 crore, up from Tk 2,000 crore 10 years ago, according to Ushamoy Chakma, managing director of Eastern Cables. "The demand for cables is increasing due to the expansion of power grid lines across the country in the last four years," he said. There are more than 70 cable manufacturers in the market but the market leader is BRB with a 41 percent share, followed by Eastern at 15 percent, BBS at 13 percent, Paradise, Partex and Bizli at 6.5 percent each, and SQ at 5.3 percent.

Disposable Plates from Banana Leaves

Disposable containers are products that are a part of day-to-day life. Disposable items like cups, plates, saucers are being increasingly used. Such disposables items are made with natural materials like leaf as well as man-made products like paper, biodegradable plastics. Leaf plates, cups have greater hygiene value. Cost-wise also it is cheaper than plastic and other plates. Banana leaves are large, flexible, and water-proof. They impart an aroma to food that is cooked in or served on them; steaming with banana leaves imparts a subtle sweet flavour and aroma to the dish. The leaves are not themselves eaten and are discarded after the contents are consumed. The pneumatic banana leaf cutting machine is used to produce different shapes of leaf spreads in faster production rate.

Banana leaf plate making is a state-of-the-art to develop biodegradable and compostable alternatives to petrochemical based plastics and polystyrene. From carrier bags to cling film, plates to cups, medical trays to plant pots, there is a crucial crusade against non-degradable plastics. A biodegradable product is one that's broken down safely and relatively quickly by microbial activity into CO₂, Water and Biomass – that's bacteria, moulds and fungi.

The global disposable plates market is projected to grow at a CAGR of 5.9% during the assessment period, to

reflect a 1.76x increase in value from 2017-2027. Around US\$ 3.6 Bn is the global disposable plates market standing in 2017 and it is estimated to reach an evaluation of about US\$ 6.4 Bn by 2027. Disposable Tableware Market is segregated by product type as Disposable Plates, Disposable Bowls, Disposable Cups, and others. Disposable Tableware Industry is classified by application as Household, Commercial, and others. Disposable Tableware Market is categorized by end user as Household, School, Restaurant, and others. Among all the end users, it has been noticed that the segment of Restaurant is taking up the largest share in the market the reason being, augmentation in the number of consumers across the globe.

Curcumin Extraction Unit

Curcumin is the main biologically active phytochemical compound of Turmeric. It is extracted, concentrated, standardized and researched. Curcumin, which gives the yellow color to turmeric, was first isolated almost two centuries ago, and its structure as diferuloylmethane was determined in 1910. Extensive research within the last half a century has proven that its renowned range of medicinal properties, once associated with Turmeric, is due to Curcumin.

Curcumin is a water-soluble orange-yellow coloured powder. Today, India is the primary exporter of turmeric (known as haldi in India). Curcumin is one of three curcuminoids of turmeric. The other two curcuminoids are demethoxycurcumin and bisdemethoxycurcumin. Curcumin is the main biologically active phytochemical compound of Turmeric. Molecular chemical formula of Curcumin: C₂₁H₂₀O₆.

Global cancer drugs market has surpassed USD 100 billion valuation in 2015 and may reach nearly USD 145 billion by 2024, with U.S. being the major consumer. U.S. herbal dietary supplements market was over USD 6 billion valuation in 2015, with estimated gains at over 7.5%. Rise in consumer awareness related to over the counter availability owing to favorable government regulations should enhance curcumin demand. India is one of the largest manufactur-

during the forecast period (2016-2024). These are the major findings of a report titled "Pallets Market: Demand for pallets in India is expected to increase at a significant rate due to the growth of the manufacturing sector in India. Growing demand for safe transportation of products is also likely to propel the growth of the market. Moreover, a rise in the development of the warehousing and logistical structure in India is anticipated to boost pallet usage shortly.

Increased demand from the user industry, upsurged economic activity, positive business sentiments and rising investment in the manufacturing and infrastructure facilities are the major growth drivers for global pallet market in the upcoming years. In addition to that, escalating demand from packaging and automobile industry is yet another factor to act as a growth driver for the global pallet market in coming future. The limited availability of raw material and high cost of raw material are the two major challenges for the global pallet market.

Compressed Wood Pallets

Presswood pallets, also known as molded wooden pallets, are made of wood byproducts such as waste pallets, raw wood shavings, wood waste, saw-dust and any other material containing wooden fibre. Their unique design means that they can hold substantial load capacities, whilst also being relatively lightweight. They are also both stackable and nestable, helping to reduce storage space and freight costs during shipment. Generally they are made from 'resinous' trees (pine, fir, etc.), the chips come directly from logging and sawmills or from the wood recycling industry. This makes this particular type of pallet extremely eco-friendly. Compressed wood pallets are recognized worldwide as complying with ISPM 15 and that the vast majority of countries readily accept the pallets without the need for further treatment.

The demand for pallets in India is expected to increase at a Y-o-Y growth rate of 9.3% in 2016 over 2015. The India pallets market is estimated to register a CAGR of 13.9%
