Plant Biotechnology Handbook

Code	NI117
Format	paperback
Indian Price	₹1100
US Price	\$125
Pages	550
ISBN	8186623833
Publisher	National Institute of Industrial Research

Description

Plant biotechnology is a precise process in which scientific techniques are used to develop molecular and cellular based technologies to improve plant productivity,

quality and health; to improve the quality of plant products; or to prevent, reduce or eliminate constraints to plant productivity caused by diseases, pest organisms and environmental stresses. It can be defined as human intervention on plant material by means of technological instruments in order to produce permanent effects, and includes genetic engineering and gene manipulation to obtain transgenic plants. Plant genetic engineering is used to produce new inheritable combinations by introducing external DNA to plant material in an unnatural way. The results are genetically modified plants (GMPs) or transgenic plants. The key instrument used in plant biotechnology is the plant tissue culture (PTC) technique which refers to the in vitro culture of protoplasts, cells, tissues and organs. Plant biotechnology in use today relies on advanced technology, which allows plant breeders to make precise genetic changes to impart beneficial traits to plants. The application of biotechnology in agriculture has resulted in benefits to farmers, producers and consumers. Plant biotechnology has helped make both insect pest control and weed management safer and easier while safeguarding plants against disease. The worldwide demand for food, feed and modern textile fibers can only be met in the future with the help of plant biotechnology. It has the potential to open up whole new business areas that will totally redefine the current market scope and perception.

This book majorly deals with the organisms of biotechnology, herbicide resistant plants, transgenic plants with improved storage proteins, engineering for preservation of fruits, enhancing the photosynthetic efficiency, basic requirements for nitrogen fixation, animal and plant cell cultures , insecticides, cellular characteristics which influence the choice of cell , the growth of animal and plant cells immobilized within a confining matrix, virus free clones through plant tissue culture , microbial metabolism of carbon dioxide , organisms involved in the conversion of hydrogen, hydrogen utilization by aerobic hydrogen oxidizing bacteria, overproduction of microbial metabolites, regulation of metabolite synthesis etc.

The book contains measurement of plant cell growth, plant tissue culture, initiation of embryo genesis in suspension culture, micro propagation in plants, isolation of plant DNA and many more. This is very helpful book for entrepreneurs, consultants, students, institutions, researchers etc.

Content

1. The organisms of biotechnology

Cells - The Basic Units

Types of Microorganism

Viruses

Prokaryotes

Eukaryotes

Algae

Protozoa

Fungi

Tissue Cultures

Animal Cells

Plant Cells

2. Transgenic plants

Herbicide Resistant Plants

1. Glyphosate Tolerant Plants

2. Sulphonylurea Tolerant Plants

3. Atrazine Tolerant Plants

4. Phosphinothricin Tolerant Plants

5. Bromoxynil Tolerant Plants

Insect Resistant Plants

1. Transgenic Plants with Bt Toxin

2. Transgenic Plants with Bt Toxin and Serine Protease

Inhibitor Gene

3. Transgenic Plants with Cowpea Trypsin Inhibitor

4. Transgenic Plants with Nicotiana glauca Proteinase Inhibitor

Virus Resistant Plants

1. Transgenic Plants with Viral Coat Protein

2. Transgenic Plants with Viral Nucleoprotein

3. Transgenic Plants with Viral SAT RNA

4. Transgenic Plants with Antisense RNA

Transgenic Plants Resistant to Fungi and Bacteria

Transgenic Plants with Improved Storage Proteins

Sweet Proteins

Enriching the Carbohydrate Contents

Improving the Quality of Oils and Fats

Male Sterility and Fertility Restoration

Changing the Flower Colours

Stress Tolerant Plants

Cold Tolerant Plants

Drought Tolerant Plants

Plant Tolerant to High Light Intensity

Engineering for Preservation of Fruits

Enhancing the Photosynthetic Efficiency

Transgenic Plants as Bioreactors

Vaccines

Interferons

Pharmaceutical Compounds

Biodegradable Plastics

3. Biological Nitrogen fixations

Non-symbiotic Nitrogen Fixation

Features Favourable for Non-symbiotic Nitrogen Fixation

1. Special separation of Nitrogen Fixing Cells

2. Protein-Nitrogenase Association

3. High Rate of Respiration

4. Time specific Nitrogenase Activity

5. Association with Rapid Oxygen Consumers

6. Presence of hydrogenase

7. Colonization

Nitrogenase

Basic requirements for Nitrogen Fixation

Mechanism of Nitrogen Reduction

Assimilation of Ammonia

Route I

Route II

Symbiotic Nitrogen Fixation

Host Specificity

Root Nodulation

Mechanism of Nitrogen Fixation

(a) Oxygen Transport by Leghaemoglobin

(b) Utilization of Oxygen by Hydrogenase

Nitrogenase

Requirement for Nitrogen reduction

Assimilation of Ammonia

4. Genetics of Nitrogen Fixation

Nif-genes of Klebsiella Pneumoniae

Regulation of Nif Genes

Nif-genes of Azotobacter

Nif-genes of Anabaena

Genetics of Legume-Rhizobium Nitrogen Fixation

1. Rhizobial Genes

a) Nod Genes

b) Nif Genes

c) Hup Genes

2. Legume Nodulin Genes

Leghaemoglobin Gene

Overall Regulation of Genes

Gene Transfer for Nitrogen Fixation

1. Transfer of Nif Genes to Non-Nitrogen Fixing Bacteria
2. Transfer of Nif Genes to yeasts
3. Transfer of Nif-Genes to plants
4. Transfer of Nod Genes
5. Transfer of Hup Genes

5. Mycorrhizae for Agriculture and Forestry

Mycorrhizal types and their structural and nutritional features

Ectomycorrhizae

Mechanism of ECM formation

Morphology and structure

Synthesis of mycorrhiza

Cultural study

Vesicular arbuscular Mycorrhiza

Introduction

Evolution

Taxonomy

Classification

Distribution

Lifecycle

Reproduction

Sexual reproduction

A sexual production

Method of Inoculum production of VAM

Some important steps in production of VAM

Host plant/growth medium

Fertilizations/micronutrients

Chemical application

Control of fungal pathogens

Plant vesicular arbuscular mycorrhizal fungal interactions

VAM and soil biota

Control of root diseases

Endomycorrhiza fungi and tree diseases

Mechanism of disease control

6. Animal and plant cell cultures

Historical perspectives

Products and potentials

Animal cells

Immuno biologicals

1. Virus vaccines
2. Monoclonal antibodies
3. Immunoregulator materials

Insecticides
Enzymes
Hormones
Whole cells
Plant cells
Pharmaceuticals
Food additives
Agrochemicals
Perfumes
Enzymes
Speciality Chemicals
Biomass applications of plant cell cultures
Cell culture and product synthesis
The nature of animal and plant cells in culture
Cell culture initiation
Culture development
Secondary cultures
Culture replication
Industrially useful cell cultures
Substrate independent cultures
Individuality of cell lines in relation to the productivity
Culture media
Growth media
Water
Inorganic salts
Trace elements
Vitamins
Buffers
Sources of energy and carbon
Nitrogen sources
1. Defined nitrogen sources
2. Undefined nitrogen sources
Growth factors
Other ingredients
Maintenance media
Cell culture technologies
Cellular characteristics which influence the choice of cell culture technology
Mixing
Aeration
Doubling times

1. Sterilization of media

2. Sterilization of equipment

Cell stickiness

Immobilized cell systems

The growth and exploitation of cell grown on the surface of a supporting solid substratum

1. Multiple process

2. Unit process

The growth of animal and plant cells immobilized within a confining matrix

1. Gel entrapment systems

2. Applications of entrapped cells

Dynamic cell systems

Air driven systems

Impeller and air driven systems

Impeller mixed systems

7. Somaclonal variation, cell selection and genotype improvement

Somaclonal variation

Historical perspective

The manifold incidence of somaclonal variation

Range of species

Characters displaying variation

Genetic nature of somaclonal variants

Pre-existing or culture induced variation

Genetic and explant sources effects

The origin of somaclonal variation

Chromosomal abnormalities

Molecular possibilities

Gene amplification and diminution

Transposable elements

Cell selection

Disease resistance

Herbicide tolerance

Nutritional quality

Other cell selection systems

8. Virus-free clones through plant tissue culture

Distribution of viruses in plants

Techniques for eradication

Heat treatment

Chemotherapy

Meristem culture

Culture media

Factors affecting developments and rooting

Virus eradication

Major use of virus-free clones

Study effect of virus infection

Source for clonal propagation

Source for in vitro mass propagation

Concluding remarks

9. Microbial metabolism of carbon dioxide

Autotrophic carbon dioxide fixation

The calvin cycle

Molecular structure and properties of RuBP case

Phosphoribulokinase

Carboxysomes

Regulation of ribulose 1,5-biphosphate carboxydase and phosphoribulakinase synthesis

The reductive carboxylic acid cycle

The anaerobic non-phototrophic autotrophs

Heterotrophic carbon dioxide fixation

10. Microbial metabolism of Hydrogen

Introduction

The role of Hydrogen in the biosphere

Enzyme catalysing the evolution and oxidation of Hydrogen

H₂ :+ Ferredoxin Oxidoreductase

H₂ : Ferricytochrome C₃ oxidoreductase

H₂ : NAD- Oxidoreductase

H₂ : Coenzyme F₄₂₀ oxidoreductase

Membrane-bound hydrogenases

Formate hydrogenlyase

Nitrogenase

Organisms involved in the conversion of hydrogen

Hydrogen-producing micro-organisms

Anaerobic conditions

1. Fermentation and fermentative bacteria

2. Anoxygenic photosynthesis and phototrophic bacteria

3. Oxygenic Phototrophic bacteria (Cyanobacteria)

4. Oxygenic green algae

Aerobic conditions : Nitrogen fixing bacteria

Hydrogen consisting organisms

Hydrogen utilization by anaerobes

1. Nitrate-reducing dentifying bacteria

2. Sulfate reducing bacteria

3. Methanogenic bacteria

4. Acetogenic bacteria

5. Fumarate-reducing bacteria

Hydrogen utilization by phototrophs

1. Anoxygenic phototrophs

2. Cyan bacteria

3. Green algae

Hydrogen utilization by aerobic hydrogen-oxidizing bacteria

The potential use of Hydrogenases and hydrogen in biotechnology

11. Microbial growth dynamics

Microbial growth in unlimited environments

Basic growth equation from cell number increase

Basic growth equation from increment increase in the population over a small growth time.

Basic growth equations.

Microbial growth in limited environments

Growth limitation by substrate exhaustion

Variation in the observed growth yield

Influence of the growth-limiting substrate on growth rate

Deviation of the Monod equation at High substrate concentrations

Basic growth limiting substrate equation

Modelling microbial growth in limited environments

The logistic equation

The saturation model

Microbial growth in open environments

Chemostat growth kinetics

The dilution rate

The dilution rate and biomass concentration

The dilution rate and growth limiting substrate concentration

Biomass and growth-limiting substrate concentrations in the steady state

Determination of $\hat{\mu}_{max}$ from washout kinetics

Establishing and maintaining the steady state

Deviations from theoretical chemostat kinetics

Influence of variation in the observed growth yield

Microbial competition

Competition in closed environments

Competition in open environments

12. Stoichiometry of microbial growth

Growth yields and material balances

Relation between ATP production and growth yields, YATP

Influence of growth rate and maintenance energy on YATP :

anaerobic chemostat cultures

Aerobic yield studies and the influence of the efficiency of oxidative phosphorylation on growth yields

Theoretical calculations on the ATP requirements for the formation of microbial biomass

Influence of Cell Composition

Influence of the carbon source and complexity of the medium

Theoretical calculations on the ATP requirement for the formation of microbial biomass

Influence of the Nitrogen source

Influence of the carbon assimilation pathway of the growth substrate

Energy-dissipating mechanisms during growth with excess carbon and source.

Influence of the degree of reduction of the growth substrate

Heat production

The stoichiometry of product formation

13. Ageing and death in microbes

Basic principles

Death of microbes

Ageing of microbes

Viability among microbes

Survival of populations : Cryptic growth

Injury among microbes

Stress and survival

The physiological status of the population

Overt and actual stress

Starvation

Substrate accelerated death (SAD)

Metabolic and structural injury

Thymine less death

Survival of slowly growing bacteria

Differentiation and survival

14. Effect of environment on microbial activity

Mechanisms of micro-organisms response to the environment

Primary response due to direct chemical or physicochemical effects

Enzyme inhibition and stimulation

Induction and repression of protein synthesis

Changes in cell morphology

Change in genotype

Dissolved oxygen

Cell Interactions with oxygen
Respiration
Oxygen incorporation
Oxygen as an inhibitor
Oxygen as an enzyme regulator
Measurement of dissolved oxygen
Generalized response to DOT
Diffusion limitation
Response of growing micro-organisms
Respiration rate
Change in cell constituents
Changes in metabolic products
Transient responses to changes in DOT
Control of DOT
Redox potential
Responses to carbon dioxide
Requirement for carbon dioxide
Inhibition by carbon dioxide
Water activity
Introduction
Halotolerance and halophily
Effects of pH
Introduction
Cellular level responses
Intracellular pH
Effects of pH membrane function
Effects of pH on uptake of substrate
Effects of pH on products of metabolism
Effects of pH on cell morphology and structure
Effects of pH on the chemical environment
Effects of pH on flocculation and adhesion
Optimum pH values for growth
Causes of pH changes in cultures
Product formation
Nutrient uptake
Oxidation/reduction reaction
Change in buffering capacity
Control of pH
By means of a buffer
By balancing metabolism
By feedback control

Temperature

Cellular-level Responses

Temperature ranges for growth

Response of growth rate to temperature

Effects of temperature on cell death

Effects of temperature on cellular components

1. Membranes

2. DNA

3. RNA

4. Proteins

Cultural effects of temperature

Response to temperature shifts

Effects on substrate utilization

Effects on product formation

Heat generation

Shear

Generation of shear

Effects of shear on filamentous fungi

Effects of shear on protozoa and animal cells in culture

Effects of products on shear rate

General control strategies

15. Biosynthesis of fatty acids and lipids

Nomenclature

Relevance and importance of lipids

Lipid composition of micro-organism

General survey

Bacteria

Yeasts

Fungi

Oleaginous micro-organism

Patterns of lipid accumulation

Factors influencing lipid biosynthesis

Growth rate

Substrate

Temperature

Growth substrate

Oxygen

pH and salinity

Other factors

Lipid biosynthesis

Acetyl- CoA carboxylase

Fatty acid synthetase
Origin of acetyl - CoA
Bacteria
Eukaryotic micro-organism
Biosynthesis of unsaturated fatty acids
Biosynthesis of other fatty acids
Biosynthesis of lipids from fatty acids
Triacylglycerols
Phospholipids
Waxes
Poly β -hydroxybutyrate
Microbial metabolism of alkanes and fatty acids
Alkane-utilizing organisms
Uptake of alkanes
Mechanisms of alkane oxidation
Oxidation of primary alcohols to fatty acids
Metabolism of fatty acids derived from alkanes
 α -oxidation
 ω -oxidation
Microbial products derived from alkanes
Fatty alcohols and aldehydes
Fatty acids
Surfactants
16. Microbial metabolism of aromatic compounds
Fission of the Benzene nucleus
Preparation of nucleus for aerobic fission
Reactions which follow ring fission
Pathways of degradation
Meta fission pathways
Degradation of 4-hydroxyphenylacetic, homoprotocatechuic
Homogentisic and gentisic acids
Protocatechuate 4,5 dioxygenase
Degradation of 3-methylglutaric acid: Biological formation of
methanol
Ortho fission pathway
Separation of pathways used for aromatic catabolism by bacteria
Catabolism of aromatic compounds in *Trichosporon cutaneum*
Degradation of aromatic industrial pollutants and pesticides
Complete mineralization
Catabolic plasmids
Release of halogen substrates from benzene nucleus

Incomplete degradation of aromatics

17. Bacterial respiration

The generation of the proton motive force

Bacterial respiratory chains

Respiration linked proton translocation

The proton motive force

The utilization of the proton motive force

ATP synthesis

Active transport of solutes

Biotechnological aspects of bacterial respiration

Biomass production

Waste treatment and metabolite production

18. Mechanisms of enzyme catalysis

The events in an enzyme catalysed reaction

Enzyme mechanisms

Enzyme kinetics

Binding of the substrate to the enzyme

Conformational changes

Covalent bond making and breaking

Glucose isomerase

19. Enzyme evolution

Regulation of metabolism

Induction

Nutritional repression

Feedback regulation

Limiting accumulation of end products

Feedback resistance mutations

Additional types of regulations

Permeability consideration

Recent approaches to strain construction

Amino-acid production by genetically engineered strains of

E-Coli and related organisms

Strain construction in other species

20. Microbial photosynthesis

Historical background

General characteristics of microbial photosynthesis

Structure and synthesis of photosynthetic pigments

Chlorophylls and bacteriochlorophylls

Carotenoids

The phycobissins

The initial reactions primary photochemistry and electron transport

Light harvesting
Charge separation and electron transport in an oxygenic
` photosynthesis
ATP synthesis
The eubacterial photosynthetic microbes
Introduction
The anoxygenic phototrophic bacteria
The major groups
Development of the photosynthetic apparatus
Carbon metabolism
The Cyano bacteria: oxygenic photosynthesis in a diverse
prokaryotic group
Organization of the photosynthetic apparatus
Interrelationship between photosynthetic and
chemosynthetic carbon metabolism in cyanobacteria
21. Extra cellular enzymes
Mechanism of Secretion
Signal hypothesis
Signal hypothesis in bacteria
Signal sequence structure
Function of signal peptide and translocation
Processing of the precursor
Gene fusion studies
Membrane associate intermediates
Alternative export mechanisms; post translocational secretion
Aspects of enzyme secretion in fungi
Regulation of Extracellular enzyme synthesis
Regulation of protein synthesis
Induction of exoenzymes
End-product repression
Catabolite repression
Patterns of exoenzyme synthesis
RNA polymerase modification
Catabolite repression
Translocational control of exoenzyme synthesis in bacteria
Control of secretion
22. Overproduction of microbial metabolites
Effects of nutrient limitation
Effects of pH and uncouplers of oxidative phosphorylation
Effects of Temperature
23. Regulation of metabolite synthesis

A phospholactase system in Klebsiella
Catabolism of unnatural sugars
Regulatory mutations
Modular pathways
Evolution of an aliphatic amidase in pseudomonas
Evolution of a new α -Galactosidase in E-Coli
Properties of the wild-type proteins
Evolution of lactose utilization
Evolution of new activities for ebg enzymes
Evolution of the ebg repressor
Decryptifying Existing Genes

About Niir

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
