## The Complete Technology Book on Wood and Its Derivatives

<b>Code</b>	NI146
<b>Format</b>	paperback
<b>Indian Price</b>	₹1100
<b>US Price</b>	\$125
<b>Pages</b>	502
<b>ISBN</b>	8186623922
<b>Publisher</b>	National Institute of Industrial Research

### Description

Wood has been used for hundreds of thousands of years for both fuel and as a construction material. Wood is an organic material, a natural composite of cellulose fibers (which are strong in tension) embedded in a matrix of lignin which resists compression. In the strict sense wood is produced as secondary xylem in the stems of trees (and other woody plants). Wood is used for millennia for many purposes, primarily as a fuel or as a construction material for making houses, tools, weapons, furniture, packaging, artworks, and paper. Wood is composed of cells, and the cell walls are composed of micro fibrils of cellulose and hemicellulose impregnated with lignin. The derivation of chemicals from wood is carried out wherever technical utility and economic conditions have combined to make it feasible. In a living tree it performs a support function, enabling woody plants to grow large or to stand up for themselves. It also mediates the transfer of water and nutrients to the leaves and other growing tissues. Wood may also refer to other plant materials with comparable properties, and to material engineered from wood, or wood chips or fiber. Wood and man have coexisted on this planet from the beginning and wood, as a renewable resource, has provided man with tools, weapons and shelter. Wood, when dry, has unique physical properties in that its tensile strength, bending strength, compression strength, impact resistance and hardness per unit weight are the highest of all construction materials. Wood polymer composites (WPC) are materials in which wood is impregnated with monomers that are then polymerized in the wood to tailor the material for special applications. The resulting properties of these materials, from lightness and enhanced mechanical properties to greater sustainability, has meant a growing number of applications in such areas as building, construction and automotive engineering. Other uses of wood in furniture, buildings, bridges, and as a source of energy are widely known. Wood is perhaps the most used component in our daily life, from home building and furnishings to everything from the tables to the doors are made of wood, and for the people living in colder climates, wood holds even greater importance. Some of the fundamentals of the book are wood structure and chemical composition, chemical change in wood associated with wood fiberboard manufacture, chemical changes in wood effected by furnish preparation processes, bark extracts as bonding agent for particle board , wood polymer composites and their industrial applications , chemical reactions of preservatives with wood, activation of wood surface and nonconventional bonding , chemistry of weathering and protection , weathering of chemically modified woods, energy and chemicals from wood, charcoal and other chemicals, etc.

The developments in wood industry in the country are mainly attributed to the pioneering work carried in the field of wooden products. There are lots of chemicals and other products extracted from wood. This book contains processes of various wooden products and its derivatives. This is the first book of its kind which is invaluable resource to research scholars, entrepreneurs, technocrats, institutes, libraries and existing one.

## Content

### 1. Wood: Structure and Chemical Composition

Gross Anatomical Features

Softwood Anatomy

Hardwood Anatomy

Cell Wall Structure

Chemical Composition of Cell Wall

### 2. Chemical Change in Wood Associated with Wood Fiberboard Manufacture

Furnish Preparation Processes

Wet Form Process Using Pressurized Refining.

Chemical Changes in Wood Effected by Furnish Preparation Processes

Board Conversion Processes

Wet Strength Properties of Hot Pressed Boards

Mechanism of Wet Strength Properties

Chemical Changes in Wood Effected by Board Conversion

### 3. Review of Particleboard Manufacture and Processing

Definition

Materials

Manufacturing

Particle Drying

Blending

Mat Formation

Finishing

Conclusion

### 4. Bark Extracts as Bonding Agent for Particle board

Material and Preparation

Bark Extracts

Three Layer Particleboard

Testing

### 5. Composition Boards Containing Bark

Amounts of Bark Available

Review of Efforts to Use Bark in Composition Boards

### 6. Polyurethane Foams from the Reaction of Bark and Diisocyanate

### 7. Wood Polymer Composites and their Industrial Applications

Chemistry of the Process

Impregnation Process

Monomers For Wood Polymer Composites

Physical Properties

Commercial Applications  
Radiation Process.  
World Wide Production  
8. Interaction of Preservatives with Wood  
Major Use Wood Preservatives  
Minor Use Wood Preservatives  
Copper Naphthenate.  
Copper 8 Quinolinolate (Copper 8)  
Tributyltin Oxide.  
New Wood Preservatives  
Preservative Distribution in Wood  
Macrodistribution  
Chemical Reactions of Preservatives with Wood  
Inorganic Salt Preservatives.  
Organic Preservatives  
9. Chemistry of Adhesion  
Thermoplastic and Thermosetting Polymers  
Molecular Forces Between Adherend and Adhesive  
Adhesives for Wood  
Phenolic Resin Adhesives  
Resoles  
Novolak  
Resorcinol Resins  
Durability and Fracture Toughness  
Urea Formaldehyde and Melamine Formaldehyde Resins  
Isocyanate Based Adhesives  
Thermoplastic Adhesives  
Hot Melt Adhesives  
Acidity of Wood  
10. Activation of Wood Surface and Nonconventional Bonding  
Conditions and Methods of Wood Surface Formation.  
Direct Covalent Wood to Wood Bonding  
Bonding Through Intermediacy of Bifunctional Molecules  
Bonding by Intermediacy of a Covalently Attached Polymer  
Use of Oxidants  
Fundamental Studies  
Surface Activation.  
Hydrogen Peroxide Activation  
Plasma Activation  
Other Oxidizing Activators  
Nonconventional Bonding

Direct Bonding  
Bifunctional Amines  
Bifunctional Acids  
Bifunctional Isocyanates  
Polymers  
Conclusions  
Addenda  
Wood Surface Studies  
Nonconventional Bonding with Acid Activation

Nonconventional Bonding with Oxidant Activation

Isocyanates  
Nonpolar Nonconventional Binders  
Other Methods  
Patents

11. Chemistry of Weathering and Protection

Backgrounds  
General Aspects of Wood Weathering  
Anatomic Structure of Wood and Its Weatherability  
Weathering Factors  
Other Factors  
Penetration of Light and Wood Surface Deterioration  
Property Changes During Weathering  
Chemical Changes  
Colour Changes  
Physical Changes  
Microscopic Changes  
Transverse Section  
Radial Section  
Tangential Section  
Weathering of Wood Based Materials  
Plywood  
Reconstituted Panel Products  
Weathering of Chemically Modified Woods  
Free Radical Reactions in Lignin  
Free Radical Characteristics and Reactions in Weathered  
Participation of Singlet Oxygen in the Weathering Process  
Protection Against Weathering  
Film Forming Finishes  
Varnishes  
Natural Wood Finishes

Film Forming  
Penetrating  
Transparent  
Semitransparent  
Protection of Wood Based Materials  
Wood Coating Interactions  
Summary and Future Considerations  
12. Biological Decomposition of Solid Wood  
Susceptibility and Resistance  
Types of Wood Deterioration  
Deterioration without Decomposition.  
Deterioration with Decomposition  
Mechanobiochemical Decomposition  
Biochemical Decomposition: The Wood Decays  
Types of Decay  
Progressive Changes in Chemical Composition  
Progressive Changes in Strength Properties  
Cellulose Decomposition  
Hemicellulose Decomposition  
Lignin Decomposition  
Control and Uses of Wood Decomposing Organisms  
Uses and Potential Uses  
13. The Chemistry of Pyrolysis and Combustion  
Formation of Volatile Products from Cellulose  
First Pathway  
  
Second Pathway  
Dehydration Reactions  
Formation and Properties of Char  
Char Formation  
Char Reactivity  
Combustion  
Combustibility  
14. Chemistry of Fire Retardancy  
Early Studies  
Protection of Wood with Fire Retardants  
Thermogravimetric Analysis (TG).  
Differential Thermal Analysis and Differential Scanning Calorimetry  
Tunnel Flame Spread Tests  
Critical Oxygen Index Test  
Test Methods for Related Properties

Smoke Production.  
Heat Release Rate  
Toxicity  
Mechanisms of Fire Retardancy  
Chemistry of Burning  
Vapor phase Combustion  
Smoldering And Glowing  
Theories of Fire Retardancy  
Barrier Theories  
Thermal Theories  
Dilution or Noncombustible Gases Theories  
Free Radical Trap Theories  
Increased Char/Reduced Volatiles Theories  
Reduced Heat Content of Volatiles Theories  
Phosphorus Nitrogen Synergism Theories  
Smoldering Inhibition Theories  
Fire Retardant Formulations  
Major Chemicals  
Aluminum Trihydrate  
Miscellaneous Chemicals  
Leach resistant Chemicals  
Amino resins  
Future Research  
Leach Resistant Compounds  
Improved Fire Retardant Treatments for Panel Products  
Effective Coating Systems  
Reduced Smoke and Toxicity  
Basic Mechanisms. Finally, further work  
Summary  
Mechanism.  
Formulations  
Future Research  
15. ENERGY AND CHEMICALS FROM WOOD  
Alternate Energy Sources  
Available Forest Residues  
Energy and Fuels from Wood  
Direct Combustion  
Saccharification Fermentation  
Ethanol from wood  
Thermal Decomposition  
Charcoal and other Chemicals

Thermochemical Liquefaction  
Furfural from Wood  
Fiberboard, particleboard, and flskeboard  
Plywood  
Laminated Lumber  
Industrial Use of Energy  
Energy Plantations

## **About Niir**

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
