The Complete Technology Book on Aluminium and Aluminium Products

Code	NI186
Format	paperback
Indian Price	₹1450
US Price	\$150
Pages	672
ISBN	8178330156
Publisher	Asia Pacific Business Press Inc.

Description

Aluminium, the second most plentiful metallic element on the earth, became an economic competitor in engineering applications as recently as the end of 19th century. It was become a metal for its time. Aluminium possesses many characteristics that make it highly compatible with recycling. It is resistant to corrosion and it thus retains a high level of metal value after use, exposure, or storage. Once produced, it can be considered a permanent resource for recycling, preferably in to similar products. It is essentially a soft and weak metal which has to be strengthened by alloying with suitable elements. The elements which are added to aluminium in appreciable quantities to increase its strength and improve other properties are surprisingly limited to only four, namely, magnesium, silicon, copper and zinc. These are added singly or in combination. It is theoretically 100% recyclable without any loss of its natural qualities. It is the most widely used non ferrous metal. The applications of aluminium are grown in many fields for example; electric conductors, windows and building components, aircraft, foil packaging etc. It has a major role in packaging industry especially in pharmaceuticals. It includes different types of packaging; unit packaging, bunch wrapping, strip packaging, thermoformed unit packaging and sachets Aluminium alloys with a wide range of properties are used in engineering structures. Aluminium alloys are divided into two major categories; casting compositions and wrought compositions. Further differentiation for each category is based on the primary mechanism. The most commercially mined aluminium ore is bauxite, as it has the highest content of the base metal. The primary aluminium production process consists of three stages. First is mining of bauxite, followed by refining of bauxite to alumina and finally smelting of alumina to aluminium. India has the fifth largest bauxite reserves with deposits 5% of world deposits. Indian share in world aluminium capacity rests at about 3%; it will touch almost 13% to 15% of the growth rate.

This book basically deals with aluminium production, heat treatable and non heat treatable alloys, properties of cast aluminium alloys, testing of liquid & solidification contraction of aluminium alloys, trends in the improving economic use of aluminium, laboratory investigation of carbon anode consumption in the electrolytic production of aluminium, alumina extraction from a pennsylvania diaspore clay by an ammonium sulfate process, the recovery of alumina from its ores by a sulfuric acid process, initial softening in some aluminium base precipitation hardening alloys, basic properties of aluminium foil, how to select a flexible foil packaging laminate, printing on aluminium foil, designing aluminium foil packs etc.

The present book covers the need within the industrial and academic communities for up to date information about production of aluminium and extrusion process due to the ever increasing use of this technology. The book provides concepts in the different areas of extrusion technology. It is hoped that its presentation will be very helpful to new entrepreneurs, technocrats, research scholars, libraries and existing units.

Content

1. GENERAL INTRODUCTION

Aluminium Production

Production Statistics

Aluminium Alloys

Heat-Treatable and Non-heat-Treatable Alloys

Properties

Manufactured Forms

Standardized products

Engineered Products

Finishes

Mechanical Finishes

Chemical Finishes

Electrolytic Finishes

Non-Electrolytic Coatings

Product Classifications

Building and Construction Applications

Containers and Packaging

Transportation

Electrical Applications

Consumer Durables

Machinery and Equipment

Other Applications

3. PHYSICAL METALLURGY OF ALUMINIUM ALLOYS

Aluminium-Magnesium Alloys
Al-Si alloys
Al-Cu alloys
Hardness Data for Al-3.8% Cu Alloy
Aluminium-zinc alloys
Complex Alloys
Aluminium-Zinc-Magnesium Alloys
Al-Cu-Mg alloys
Al-Mg-Si alloys
Effect of Plastic Deformation on Precipitation
Intermetallic Compounds and their Effects
Corrosion of Aluminium Alloys

4. TESTING OF LIQUID & SOLDIFICATION CONTRACTION OF ALUMINIUM ALLOYS

1. Derivation of Correlations
2. Experimental procedure
3. Results and Discussion

5. TRENDS IN THE IMPROVING ECONOMIC USE OF ALUMINIUM

1. Reduction in Dimensions and Weight
2. More Efficient Use of Metal
3. Improvements in Methods of Protection
4. New Concepts in Design

Corrosion Studies Applied to Roofing Sheet and Water Pipes

Using Structural Aluminium Efficiently

Aluminium Electrical Conductors

Overhead Conductors

Underground Cable

Transformer Windings

Development of Welding Techniques and Weldable Alloys

Welding Processes

Development of Alloys

Conclusion

6. LABORATORY INVESTIGATION OF CARBON ANODE CONSUMPTION IN THE ELECTROLYTIC PRODUCTION OF ALUMINIUM

Introduction

Materials

Anode Carbon

Electrolyte Materials

Apparatus

Procedure

General

Operation at Different Current Densities

Operation at Different Temperatures

Operation at Different Electrolyte Compositions

Results

Effect of Anode Current Density

Effect of Electrolyte Temperature

Effect of Carbon Baking Temperature

Effect of Electrolyte Composition

9. AN IMPROVED ALUMINIUM CONDUCTOR

Electrical Properties of Aluminium
Experimental Work
The PM-2 Conductor
Corrosion Tests
Earthing Tests
Conclusion

10. INITIAL SOFTENING IN SOME ALUMINIUM BASE PRECIPITATION HARDENING ALLOYS

Experimental Procedure
Preparation of Alloys
Heat Treatment
Hardness Measurements
X-ray Diffraction Studies
Results
Dissussion
Quenched Hardness
Extent of Softening
Time to Reach Minimum Hardness
Range of Softening
X-ray line width
Conclusion

11. BASIC PROPERTIES OF ALUMINIUM FOIL

Introduction
Production of Aluminium
Manufacture of Aluminium Foil

Metal Purity
Alloying
Annealing
Soft Foil For Flexible Packaging
Safety of Foil For Food Packaging
Strength
Perforations or Pinholes
Foil Costs
Need For Standardization
Future of Foil in Packaging

12. HOW TO SELECT A FLEXIBLE FOIL PACKAGING LAMINATE

Introduction
Materials
Physical Properties of Foil
Physical Properties of Paper
Physical Properties of Films
Cellulose Film
Polyamide (Nylon)
Polyester (Terylene)
Polythene
Polypropylene
PVDC
Note
Laminating Processes
Wax
Hot Melts
Pastes

Economic Considerations

Other Printing Processes

Web Offset Lithography

Electrostatic Printing

15. HEAT SEALING FOIL PACKS

Importance of Heat-sealing

Principles of Heat-sealing

Sealing Coated Aluminium Foils by Heat

Determination of Optimum Heat-sealing Conditions

Factors Controlling the Heat-seal Strength

Failure by Peeling

Paper/Foil Laminates

Types of Thermoplastic Coatings

Sealing Temperatures of Typical Foil Laminates

16. AUTOMATIC PACKAGING IN FOIL

17. LIQUID PACKAGING IN ALUMINIUM FOIL

Introduction

Marketing and Economic Considerations

1. Economics

2. Convenience

3. Presentation

Types of Foil Pack that are Formed, Filled and Sealed from the Reel
Sachets

Two-cavity Sachets

Production of Sachets

Rectangular and Tetrahedral Packs Incorporating Aluminium Foil
For Milk and Cream

For Fruit Juice

Gusseted Bottom Packs

Other Liquids And Semi-liquids

The Value of Foil In Sealable Laminates

What of the Future?

18. ALUMINIUM FOIL IN PHARMACEUTICAL PACKAGING

Introduction

Aluminium Foil as a Cap Liner Facing for Rigid Containers

Unit Packaging

Bunch Wrapping

Strip Packaging

Thermoformed Unit Packaging

Sachets

19. STERILIZABLE ALUMINIUM FOIL FOOD PACKS

Introduction

Reasons for Using a Processable Pouch

Laminate Structure

Pinhole Damage in Foil

Sterilizing Techniques

Filling and Sealing Pouches

Pouch Integrity

Microbiological Aspects

Storage Testing and Heat Penetration

The Commercial Situation

Summing-up

20. BENEFICIATION OF BAUXITE

Experimental Procedure and Results

Evaluation of the Economics of Bauxite Beneficiation

A Proposed Scheme for Beneficiation by Dry Screening

21. ALUMINIUM IN ENGINEERING

Transport Industry

Air

Road

Rail

Marine

Automobile Ancillaries

Airconditioning and Refrigeration

Bearings

Electrical Machinery

Construction Industry

Mining Industry

About Niir

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
