## The Complete Book on Construction Materials

<b>Code</b>	NI190
<b>Format</b>	paperback
<b>Indian Price</b>	₹1475
<b>US Price</b>	\$150
<b>Pages</b>	672
<b>ISBN</b>	9788190439831
<b>Publisher</b>	NIIR PROJECT CONSULTANCY SERVICES

### Description

Construction industry is the largest consumer of material resources, of both the natural ones (like stone, sand, clay, lime) and the processed and synthetic ones. Each material

which is used in the construction, in one form or the other is known as construction material (engineering material). No material, existing in the universe is useless; every material has its own field of application. Stone, bricks, timber, steel, lime, cement, metals etc. are some commonly used materials by civil engineers. Selection of building material, to be used in a particular construction, is done on the basis of strength, durability, appearance and permeability. The stone which is used in the construction works, in one form or another is always obtained from the rocks. The rocks may be classified in four ways; geological classification, physical classification, chemical classification and classification based on hardness of the stone. Various kind of rocks come under these classification for example; igneous rocks, plutonic rocks, sedimentary rocks, silicious rocks, stratified rocks etc. brick is the most commonly used building material which is light, easily available, uniform in shape and size and relatively cheaper except in hilly areas. Bricks are easily moulded from plastic clays, also known as brick clays or brick earth. Bricks can be moulded by any of the three methods; soft mud process, stiff mud process and semi dry process. There are various kinds of bricks; specially shaped bricks, burnt clay bricks, heavy duty bricks, sand lime bricks, sewer bricks, refractory bricks, acid resistant bricks etc. lime is an important building material, it has been used since ancient times. Lime is used as a binding material in mortar and concretes, for plastering, for manufacturing glass, for preparing lime sand bricks, soil stabilization etc. Concrete is a construction material obtained by mixing a binder (such as cement, lime, mud etc.), aggregate (sand and gravel or shingle or crushed aggregate), and water in certain proportions. Based on the binding materials, the common concretes can be classified as; mud concrete, lime concrete, cement concrete and polymer concrete. World demand for cement and concrete additives is projected to increase 8.3 percent annually in next few years.

This book basically deals with rock and stone, formation of rocks, classification of rocks, geological classification, metamorphism physical classification of rocks, chemical classification, classification based upon hardness of the stone composition of stone (rock forming minerals), igneous rock forming minerals, sedimentary rock forming minerals, texture of the rocks, types of fractures of rock, uses of stone, natural bed of stone, aluminium and magnesium alloys, mechanical properties of a partially cured resin, DMA characterization, chemical advancement of a partially cured resin, differential scanning calorimeter characterization, chemical mechanical relations, moisture content as a variable, wettability and water repellency of wood, fungal and termite resistance of wood etc.

The book provide wide coverage of building materials such as stone, bricks, lime, mortars, concrete, asbestos, gray iron, cast iron, steel castings, aluminium, wood, architectural paints and so many others with their applications in building construction. The book is resourceful for all professionals related to construction field, technocrats, students and libraries.

## **Content**

### **1. STONE**

Introduction

Rock and Stone

Formation of Rocks

Classification of Rocks

Geological classification

Metamorphism

Physical classification of rocks

Chemical classification

Classification based upon hardness of the stone

Composition of Stone (Rock-forming Minerals)

Igneous rock forming minerals

Sedimentary Rock Forming Minerals

Texture of the Rocks

Types of Fractures of Rock

Uses of Stone

Natural bed of Stone

Seasoning of Stones

Characteristics or Qualities of Stones

Characteristics of principle Building Stones

Properties

Decay or Deterioration of Stones

Preservation of Stone

Artificial Stone

Important point to be Considered before Starting Quarrying

Methods of quarrying Stone

Various Operations of Blasting

Precautions in Blasting

Blasting materials

Making of Primer Cartridge

Storing of explosives

Handling of misfires

Dressing of Stone

Machines Required for Quarrying Stone

### **2. BRICKS AND OTHER CLAY PRODUCTS**

Introduction

Brick Earth and its Constituents  
Sources of Brick Earth  
Qualities of Brick Earth  
Chemical composition of Brick Earth  
Functions of the constituents of Brick Earth  
Harmful Ingredients  
Pebbles of Stones and Gravel  
Alkaline-Salts  
Limestone and Kankar  
Vegetation and Organic Matter  
Manufacture of Clay Bricks  
Selection of site  
Preparation of Clay  
Weathering Process  
Tempering process  
Moulding of bricks  
Soft mud process  
Procedure  
Stiff Mud Process  
Semi Dry Process  
Drying of Bricks  
Natural Drying  
Artificial Drying  
Burning of Bricks  
Clamp  
Intermittent Kilns  
Continuous Kilns  
Classification of Burnt Clay Bricks  
Introduction  
Properties of Burnt Clay Bricks  
General Quality of Bricks  
Dimensions and Tolerances  
Water Absorption of Bricks  
Efflorescence  
Strength of Bricks  
Testing of Bricks  
Test for Compressive Strength  
Test for Water Absorption  
Test for efflorescence  
Test for warpage  
Special Bricks

Specially shaped Bricks  
Burnt Clay Facing Bricks  
Heavy Duty Bricks  
Perforated building bricks  
Sand lime Bricks  
Sewer Bricks  
Acid Resistant Bricks  
Refractory Bricks  
Manufacture  
Acid bricks  
Basic Bricks  
Neutral Bricks  
Building Tiles  
Process for Manufacturing Roofing Tiles  
Process for Manufacturing Flooring and Wall Tiles  
Specifications for Building Tiles  
Earthenwares  
Glazed Earthenware Tiles  
Terracotta  
Stoneware

### 3. LIME

General  
Properties of Lime  
Uses of Lime  
Source of Lime  
Some Important Terms and their Definitions  
Varieties of lime  
Classification of Lime  
Uses of fat lime  
Classification of Lime According to I.S. 712-1984  
Indian Standard Specification for Lime  
Manufacturing process  
Description of Each Stage of Operation  
Field Control Test for Assessing Quality of Lime  
Manufacture of Fat Lime  
Advantages of continuous kiln  
Manufacture of Natural Hydraulic Lime  
Manufacture of Artificial Hydraulic Lime  
Storage of Lime  
Field Slaking of Lime and Preparation of Putty

- Objective of Slaking
- Slaking Process
- Determining the Slaking Nature of Lime
- Slaking Procedure for Quick Slaking Lime
- Initial Preparation
- Methods of Slaking Lime
- General Precautions in Slaking
- Slaking Procedure for Medium and Slow-slaking Limes
- Running
- Maturing
- Making Coarse Stuff and Putty from Hydrated Lime or Powder
- Coarse Stuff
- Putty
- Storage after slaking
- Testing of Lime
- Classification of binding materials
- Precautions to be taken in handling lime
- Properties of Lime

#### 4. MORTARS

- Definitions
- Sand
- Classification Based on Fineness
- Bulking of Sand
- Desirable Properties of Sand
- Function of Sand in Mortars
- Fineness Modulus of Sand
- Tests for Sand
- Selection of Sand for Use
- Substitutes for Sand
- Types of Mortars
- Special Mortars
- Properties of Good Mortar
- Test for Mortars
- Precautions in using Mortar

#### 5. CONCRETE

- Introduction
- Lime Concrete
- Preparation of lime Concrete
- Laying of Lime Concrete

Properties of Lime Concrete  
Use and Precautions  
Water  
Coarse Aggregate  
Grading of Aggregate  
Proportioning of Fine Aggregate to Coarse Aggregate  
Maximum Size of the Aggregate  
Measurement of Cement Concrete Ingredients  
Significance of Bulking of Sand  
Water Cement Ratio (W/C Ratio)  
Proportioning of Concrete Mixes  
Cube strength of Concrete  
Properties of Cement Concrete  
Slump Test  
Factors Affecting Proportions of Concrete  
Strength of Concrete  
Mixing of Concrete  
Transporting the Concrete  
Placing of Concrete  
Consolidation or Compaction of Concrete  
Finishing  
Curing of Concrete  
Removal of Form Work  
Joints in Concrete  
Some other Types of Cement Concretes  
Form Work

## 6. ASBESTOS

Introduction  
Commercial Focus  
Asbestos Sheets and Boards  
Asbestos Cement Pipes

## 7. ASPHALT, BITUMEN AND TAR

Introduction  
Terminology  
Asphalt/Bitumen  
Other Allied Terms  
Bituminous Materials  
Bitumen Felt/Tar Felt  
Specifications and use

Other Bituminous Materials

Tests for Bitumen

Tar

## 8. GRAY IRON

The Metastable Iron-Iron Carbide System

Solidification of an Fe-C-Si Alloy

Chemical Composition Effects

Carbon

Silicon

Silicon Content and Graphitization

Sulfur and Manganese

Phosphorus

Gray-iron Specifications

Heat-treatment of Gray Iron

Machinability

Wear Resistance

Strength

Stress Relief

Alloying Elements

Effect on Microstructure

Chromium

Molybdenum, Molybdenum-Nickel

Nickel

Silicon

Copper

Aluminum and Titanium

Effect on Properties

## 9. CAST IRON

Definitions

Chemical Composition

Composition and Graphitization

Solidification Process

Microstructure

Graphite

Cementite

Ferrite

Pearlite

Steadite

Austenite

Properties of Cast Irons

White Irons

Chilled Iron

## 10. STEEL CASTINGS

Introduction

Molding Processes And Sands

Green-sand Molding

Refractoriness

High permeability and Low Moisture Content

Organic and Other Additions

Green-sand-molding Casing Defects

Dry-sand Molds and Skin-dried Molds

Other Types of Molds

Molding Methods

Cores

Hot-tear Formation

Metal penetration

Burn-on

Ceroxides

Core and Mold Washes

## 11. ALUMINIUM AND MAGNESIUM ALLOYS

ALuminum Alloying Principles

Copper

Heat-treatment of Cu-Al Alloys

Silicon

Magnesium

Magnesium and silicon

## 12. DUCTILE IRON

Solidification Of Ductile Iron

Development of Graphite Spheroids

Role of Magnesium

Control of the Common Elements

Carbon

Silicon

Sulfur

Phosphorus

Other Elements

Melting Practices

Acid Cupola Melting  
Desulfurization  
Basic Cupola Melting  
Induction-furnace Melting  
Magnesium Treatment  
Inoculation  
Engineering Properties

### 13. MALLEABLE IRON

Melting  
Batch-Melting Process  
Engineering Properties  
Pearlitic Malleable Irons  
Other Malleable Irons

### 14. RESIN CHARACTERIZATION

Introduction  
Scope  
Mechanical Properties of a Partially Cured Resin – DMA Characterization  
Chemical Advancement of a Partially Cured Resin – Differential Scanning Calorimeter  
Characterization  
Chemical-Mechanical Relations  
Moisture Content as a Variable  
Flake Bonding  
Measurement of Pressing Environments  
Resin Penetration  
Practical Application

### 15. THERMO-GRAVIMETRY OF WOOD REACTED WITH FLAME RETARDANTS

Introduction  
Experimental Methods  
Results and Discussion  
Phosphorus And Nitrogen  
Thermogravimetry  
Flame Test  
Conclusions

### 16. WETTABILITY AND WATER REPELLENCY OF WOOD

Introduction  
Experimental  
Wood materials

Automated surface tension analyzer  
Computer program: wood wettability study  
Graph  
Contact angle from attractive force  
Contact angle from work of adhesion  
Surface free energy estimation  
Interaction parameter calculation  
Aging effect  
Results and Discussion  
Aging effect  
Surface free energy estimates  
Interaction parameter calculation

## 17. FLAME RETARDANT TREATMENT OF WOOD

Introduction  
Materials and Methods  
Preparation of specimens  
Treatment of specimens  
Leaching  
Dimensional stability tests  
Thermogravimetric analysis  
Results and Discussion  
Treatment of specimens  
Leach resistance  
Dimensional stability  
Thermal degradation  
Conclusions

## 18. FUNGAL AND TERMITE RESISTANCE OF WOOD

Introduction  
Materials and Methods  
Fungal evaluations  
Termite evaluations  
Reaction time and chemical analysis  
Results and Discussion  
Decay Resistance  
Chemical Analysis  
Conclusions

## 19. WEATHERING OF WOOD

- Introduction
- Early History
- The Weathering Process
- Weathering Factors
- Property Changes
- Weathering of Wood-Based Materials
- Protection Against Weathering
- Film-forming Materials
- Penetrating Finishes
- Summary

## 20. ARCHITECTURAL PAINTS

- Introduction
- Exterior Paints for Wood
- Characteristics of Wood Siding
- Binders for Exterior House Paints
- Pigments for Colored Paints
- Microorganisms in Paints and Coatings
- Formulating Exterior Paints for Wood
- Interior Paints for Plaster and Wallboard
- Exterior Emulsion Paints for Masonry
- Exterior Solution Type Paints for Masonry
- Interior and Exterior Enamels
- Enamels for Wood and Concrete Floors

## 21. BUILDING CONSTRUCTION ADHESIVES

- Introduction
- Advantage of Using Adhesives in Construction
- Elastomeric Adhesives
- Gap-Filling Phenol Resorcinol Adhesives
- Polyurethane Adhesives
- Resorcinol Resin Adhesives
- Casein Adhesives
- Polyvinyl Acetate Resin Emulsion
- Phenolic Resin Adhesives
- Melamine-Urea Resin Adhesives
- Urea Resin Adhesives
- Epoxy Resin Adhesives
- Contact Cement

## 22. FLOORING

- Domestic Flooring
- Institutional Flooring
- Industrial Flooring
- Types Of Epoxy Flooring
- Self-levelling Floors
- Trowelled Floors
- Epoxy Terrazzo
- Future Developments In Epoxy Floors

## 23. MINING

- Adhesion And Grouting
- Remedial Uses
- Concrete Crack Repair
- Bonding Concrete to Concrete
- Bonding Reinforcements
- Epoxy Bonding in New Structures
- Fire Resistance
- Bulk Mechanical Properties
- Creep
- Miscellaneous Bonding Applications

## 24. GROUTS FOR LEVELLING: MISC. APPLICATIONS

- Miscellaneous Applications
- Soil consolidation
- Tile grouts
- Epoxy laminates for concrete moulds
- Resin concrete

## 25. GLASS

- Structure
- Composition
- Single-Phase Glasses
- Properties
- Manufacture and Processing
- Economic Aspects

## 26. CEMENT

- Clinker Chemistry
- Hydration
- Cement Paste Structure and Concrete Properties

Manufacture  
Portland Cements  
Special Purpose and Blended Cements  
Nonportland Cements  
Economic Aspects, Production, and Shipment  
Specifications and Types  
Uses

## 27. INSULATING MATERIALS

Introduction  
Thermal Insulation  
Terminology Related to Thermal Insulation  
Requirements of Thermal Insulating Materials  
Types of Insulating Materials  
Air Spaces  
Aerated Concrete  
Gypsum  
Expanded Blast Furnace Slag  
Sprayed Asbestos  
Vermiculite  
Coconut Fibres  
Cork Board  
Rock Wool  
Cellulose  
Cellular Plastics  
Fibre Glass  
Sound Insulation  
Terminology  
Units of Sound  
Velocity of Sound  
Acoustics  
Noise  
Requirement of Sound Insulating Materials  
Types of Acoustical Materials  
Acoustic Pulp  
Acoustical Plaster  
Unifil Acoustical Plaster  
Limpet Asbestos  
Thermacoustic  
Prefabricated Boards or Tiles  
Glass Fibres

## About Niir

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
