The Complete Technology Book on Steel and Steel Products (Fasteners, Seamless Tubes, Casting, Rolling of Flat Products & others)

Code: NI206	Format: paperback
Indian Price: ₹1625	US Price: \$150
Pages: 576	ISBN: 8178330180
Publisher: Asia Pacific Business Press Inc.	

Description

Iron and steel have played a leading role in the development of human civilization and their techniques. Together with its derivative, steel, iron has no real rival in its particular fields of application and has become a synonym of progress, being an essential element in mankind greatest technological achievements. It was at the origin of the industrial and scientific revolutions and at the heart of all the great discoveries which have marked the history of humanity from the manufacture of high quality swords in ancient times to today architectural wonders. Steel is an alloy that consists mostly of iron and has carbon content between 0.2% and 2.1% by weight, depending on the grade. Carbon is the most common alloying material for iron, but various other alloying elements are used, such as manganese, chromium, vanadium, and tungsten. Rolling is a metal forming process in which metal stock is passed through a pair of rolls. Rolling is classified according to the temperature of the metal rolled. Steelmaking is the second step in producing steel from iron ore. Processing of steel results in special steel product with required properties, for example; vacuum treated steel for forging ingots; pre strengthened stress relieved elongated steel, metallurgical addition product, forging powder alloy steels, etc. Fasteners are used to join and hold two or more pieces of metal either temporarily or more pieces of metal either temporarily or permanently. Some of the most common are bolts, screws, nuts, rivets and pins. Packaging steels differ from other sheet products particularly in terms of their thickness, mechanical properties and coatings, together with their aptitude to satisfy specific industrial and marketing requirements related to high production rates, design factors etc. Small gage welded tubes have an extremely wide range of applications,

including metallic roof frames, mechanical construction in public work and industrial engineering sector, agricultural machinery, fluid distribution circuits, piston, etc. India is among the top producers of all forms of steel in the world. Easy availability of low cost manpower and presence of abundant reserves make India competitive in the global setup. The steel industry in India has witnessed an increase in demand due to expanding oil and gas sector, huge spending on infrastructural facilities coupled with growth in housing, consumer durables and auto sectors.

This book basically deals with structural changes in steel during hot rolling, structural changes during reheating, kinds of grain restoration process, dynamic restoration process, static restoration process, effect of initial grain, size of static re crystallization, effects of temperature and micro alloying, fundamental principles of the metal rolling process, preparing and heating the initial materials, preparations for rolling heating before rolling operations, bolt and nut manufacturing technology, casting of steel for flat products etc.

The present book covers different important aspects of steel processing with the casting method of steel for flat products, rolling of rails, wheels and rings, rolling of different steel products, production of fasteners, welded pipes, steel products for the building trade and many more.

The book is very useful for everybody who wants the thorough study on steel and steel products or wants to diversify in to this field.

Content

1. Structural Changes in Steel during Hot Rolling

Structural Changes during Reheating

Kinds of Grain Restoration Process

Dynamic Restoration Process

Static Restoration Process

Effect of Initial Grain Size of Static Recrystallization

Effects of Temperature and Microalloying

Effect of Amount of Deformation

Factors Affecting Critical Reduction for

Recrystallization

Grain Growth after Deformation

Structural Changes in Steel during Cooling

Effect of Steel Structure on Flow Stress

2. Fundamental Principles of the Metal Rolling

Process

3. Steels for Magnetic Applications

Electrical Steels-Metallurgy and Properties

Introduction

Utilization and Property Requirements

Optimization of Magnetic Properties

Type of Electrical Steel

Classification

Steel Grades

Market Segmentation

Conclusions

4. Preparing and Heating the Initial Materials

Preparations for Rolling

Heating before Rolling Operations

5. Hot Seamless Tube Rolling Processes

Elements of Skew Rolling Theory

Tube Rolling in Plug Mill Type Seamless Tube Mills

Tube Rolling in Continuous Seamless Tube Mills

Tube Rolling in Three-Roll Mills

Tube Rolling in Pilger Mills

Seamless Tube Production by the Extrusion Process

Seamless Tube Finishing Operations

6. Bolt and Nut Manufacturing Technology

Introduction

Fundamentals of Mechanically Working and Cutting Metals

(a) Cold Forming

(b) Hot Forging

(c) Metal Cutting

Manufacturing Technologies

(a) Cold Forming of Bolts

(b) Cold Forming of Nuts

(c) Hot Forging of Bolts

(d) Hot Forging of Nuts

(e) Machining of Bolts and Nuts from Hexagon Bar

Steel Pre-Processing

(a) Steel Making

(b) Surface Treatments and Wire Drawing

Fastener Steels and Heat Treatments

(a) Alloying Elements

(b) Heat Treatments

Finishing Operations

7. Casting of Steel for Flat Products

Type of Cast Products

Casting of Ingot

Types of Ingots

Methods of Continuous Casting of Thick Slabs

Continuous Casting of Thick Slabs

Slab Width Control

Continuous Casting of Thin Slabs and Strip

Requirements for Continuously Cast Steels

Oxide Inclusions in Concast Steel

Formation of Oxide Phases

Influence of Caster Type on Steel Quality

8. The Rolling of Rails, Wheels and Rings

Introduction

Early Types of Rails and their Production

The Evolution for the Rail Mill

Modern Rail Mills

Rail Joints and their Manufacture

The Forging and Rolling of Wheels

Ring Rolling

9. Mill Automation for the Rolling of Flat Products

Automation of Flying Shear Operation in a Continuous
Hot-Rolling Mill

Automation of Coiler Operation for Hot Strip

Automation of Strip Measuring Gauges for Hot Rolling

Automation of Continuous Pickle Line Operation

Automation of Strip Thickness Gauges for Cold Reduction

Automation of Strip Thickness Control by the Screw-
Down Gear

10. General Steelmaking Processes

Welding Material for Super Low Temperature Steels

Refining Steel by Blowing Oxygen Beneath the Surface

Cold Reduced Aluminum Stabilized Steel having High
Drawability

Sulfide Modification of Steel

Steel Sheets having Excellent Enamellability

Liquid Sintering with Titanium Alloys

Liquid-Solid Alloys for Casting

Rimmed Unkilled Enamelling Steel

Producing an Enamelling Steel Sheet

Deep Drawable Deoxidized Steel

Alloying Steel with Highly Reactive Materials
Prevention of Surface Cracking during Steel Reheating
Prestrengthened Stress Relieved Elongated Steel
Vacuum Treated Steel for Forging Ingots
Metallurgical Addition Product
Uncropped, Unworked, Elongated Lead Steel Casting
Adding Alloys to Steel
Production of Low Carbon Ferroalloys
Forging Powder Alloy Steels
Production of Lead Steel
Low Carbon Ferrochromium
High Explosive Fragmentation Munition
11. Varnishing and Printing of Packaging Steels

Introduction
General Aspects of Organic Coatings used for
Varnishing and Printing
Definition
Types of Organic Coating
Organic Coating Constituents
Application and Curing of Organic Coatings
Application with Roller Varnishing Machines
Curing
Other Application Techniques
Inspection Methods
Printing and Decoration of Metallic Packaging
Conclusions

12. Phase Transformation in Steel
Phase Diagram
Constituents in Steels
Austenite
Ferrite
Graphite
Cementite
Eutectoid
Pearlite
Eutectic
Ledeburite
Transformation Temperature
Phases in Hypoeutectoid Steel
Phases in Eutectoid Steel

Phases in Hypereutectoid Steel

Phase Transformation Hysteresis

Supercooling or Austenite

Bainite

Martensite

Isothermal Transformation Diagram

Continuous-Cooling Transformation Diagram

13. Optimization and Modernization of Hot Strip Mills

Main Strategy in Optimization of Rolling Process

Metallurgical Requirements

Energy Consumption Requirements

Yield Requirements

Product Quality Requirements

Analysis of Temperature Conditions in Hot Strip Mill

Methods of Optimizing Temperature Conditions

Optimizing Operating Parameters

Close Coupling of Continuous Rougher with Finishing Mill

Close Coupling of a Reversing Rougher with Finishing Mill

Combining a Reversing Rougher with Finishing Mill Coilbox

Intermediate Steckel Mill

Reradiating Thermal Cover System

Main Objectives in Modernization of Hot Strip Mill

Requirements for the Evaluation Models

Evaluation of the Solutions for Mill Modernization

14. Low Carbon Constructional Alloy Steels

Low Temperature High Strength Tough Steel

Alloy Steel for Arctic Service

High Strength Cold Rolled Steel with High Press Formability

Production of High Strength Cold Rolled Steel Sheet

Low Alloy Steel for Low Temperature Services

Full Continuous Annealing Process

High Strength Killed Wire Rods and Bars

High Formability High Strength Steel

High-Strength Cold-Workable Ti Added AL Killed Steel

Improving Strength and Toughness by Controlled

Cooling

High Strength Notch Tough Steel

Hot Rolled High Strength Low Alloy Steel

Preparation of Hot Rolled Niobium Structural Steel

Hot Rolled Flat Steel for Cryogenic Service

High Strength Structural Steel with Good Weldability

15. Hot Rolling of Plate, Sheet and Strip

Types and Sizes

Initial Materials and Reheating them for Rolling

Hot Rolling Sheet and Plate Mills

Hot Rolling Processes for Plate and Sheet in Various

Types of Mills

Rolling Steel Strip in a Planetary Mill

Finishing of Hot-Rolled Flat Products

16. Rolling of Section Steel, Bars and Rods

Types and Sizes

Initial Materials and Reheating them for Rolling

Section Mills

Rod Mills

Strip Mills

Roll Pass Design for the Rolling of Rounds

Roll Pass Design for the Rolling of Squares

Roll Pass Design for the Rolling of Flats and Strip

Roll Pass Design for the Rolling of Angles

Finishing Operations on Bars and Rods

17. Modern Rolling Plant

Mills for the Continuous Rolling of Wide Strip

Modern Plant for the Rolling of Non-ferrous Material

Copper and Copper Alloys

Nickel and Nickel Alloys

Aluminium and Aluminium Alloys

18. Metal Fasteners

Machine Bolts

Cap Screws

Machine Screws

Set Screws

Thread-forming Screws

Stove Bolts

Carriage Bolts

Stud Bolts

Nuts

Castle Nuts

Jam Nuts

Cap or Acorn Nuts

Wing Nut

Washers

Rivets

Machine Pins

19. Production of Welded Pipe

Continuous Furnace Butt-Welded Pipe Manufacturing Processes

Electric Resistance Welded Pipe and Tubing Production

High Frequency Electric Resistance Welding in Pipe and Tubing Production

Submerged-Arc Welded Pipe and Tubing Production

Production of Submerged-Arc Welded Straight-Seam Pipe

Production of Submerged-Arc Welded Helical-Seam Pipe

Other Welded Pipe Production Methods

Inert-Gas Metal-Arc Welding of Pipe

Induction Welding of Pipe and Tubing

20. Sheet Forming for Packaging Applications

Drawing of Packaging Steels

Specific Aspects of Packaging Steels

Characterization of Packaging Steels

Parameters Affecting Drawing Behavior

Example Applications

Drawing and Wall Ironing of Packaging Steels

Preliminary Drawing

Wall Ironing

Necking and Flanging

Full Aperture Easy-Open Can Ends

Score Line Profile (Tool Geometry and Residual Thickness)

Score Line Shape in the Plane of the LID

End Profiles

Steel Grades

Can End Seaming

Principle of Double Seaming

Seaming Tools

21. Mill Automation for Pipe and Tubing Production

22. Steels for Small Gage Welded Tubes

The Small Gage Welded Tube Market

Manufacturing Processes

Steel Products used in the Manufacture of SWT[™]s

Major Property Requirements

Conditions to be Met in SWT Manufacture

Geometry Control

Principal Grades Employed

23. Steel Products for the Building Trade

Statutory Requirements

Building Steels and their Coatings

Steel Selection

Galvanized Steels

Coil Coated Steels

The New Solissime Range

Coating Selection Guide

Utilization and Maintenance Precautions

Additional Products

“Condensation-proof” Coatings

Acoustic Insulation

Thermal Insulation

Solconfort Sandwich Sheets

Isofran Sandwich Sheets

Typical Applications

Walling and Roofing

Facing Systems

Flooring

Conclusions

About NIIR Project Consultancy Services (NPCS)

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of

Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
