## **Surface Coating Technology Handbook**

Code: NI216	Format: paperback
Indian Price: ₹1475	US Price: \$125
Pages: 680	ISBN: 9788178331188
Publisher: Asia Pacific Business Press Inc.	

# **Description**

Surface Coating is in use since long back is rapidly increasing with the development of civilization. There has been considerable impact in this field. Surface coating technology specializes in finding out engineering solutions to all the critical production problems related to coating the products on a continuous and consistent basis in your production plant. Surface coating can be defined as a process in which a substance is applied to other materials to change the surface properties, such as colour, gloss, resistance to wear or chemical attack, or permeability, without changing the bulk properties. Production of surface coating by any method depends primarily on two factors: the cohesion between the film forming substances and the adhesion between the film and the substrate. The development of science and technology revolutionized the surface coating industry in the progressive countries of the world. Surface coating technology involves the use of various types of products such as resins, oils, pigments, polymers, varnishes, plasticizers, emulsions, etc. We have completely replaced costly petroleum solvents with water and we get cheaper finished products with no evaporation loss and fire hazards. Paint is any liquid, liquefiable, or mastic composition which after application to a substrate in a thin layer is converted to an opaque solid film. It is most commonly used to protect, colour or provide texture to objects. The paint industry volume in India has been growing at 15% per annum for quite some years now. Varnish is one of the important parts of surface coating industry. They are used to change the surface gloss, making the surface more matte or higher gloss, or to provide the various areas of a painting with a more unified finish. Plasticizer plays an important role in the formation of polyvinylchloride (PVC). It is also used to plasticize the polymers. Polymers are divided into three different types; linear polymers, branched polymers and cross linked polymers. Polymer Energy system is an award winning, innovative, proprietary process to convert waste plastics into renewable

energy. On the basis of value added, Indian share of plastic products industry is about 0.5% of national GDP.

This book basically deals with principles of film formation, evaporation of solvent from a solution, chemistry and properties of drying and other oils, glyceride structure and film formation, the size of polymer molecules, processing of oil and resin, inorganic pigments, classification by chemical constitution, azo pigments, organic pigments in architectural (decorative), organic pigments in industrial finishes, solvent requirements of specific resins convertible systems, molecular structure of polymer plasticiser systems, properties of plasticised polymers, surface active agents, optical properties, rheological characteristics, emulsions and other aqueous media, formation of polymer emulsions, modern methods of analysis etc.

The book presents a concise, but through an overview of state of technology for surface coating. This is organized into different chapters like principal of film formation, chemistry and properties of drying and other oils, processing of oil and resin, organic pigment, solvents, plasticizer, surface active agent, surface preparations etc. This book is an invaluable resource to technocrats; new entrepreneurs, research scholars and others concerned to this field.

## **Content**

- 1. PRINCIPLES OF FILM FORMATION
- Cohesive and Adhesive Forces
- 1. Mechanical Forces
- 2. Molecular Forces

Evaporation of Solvent from a Solution

- 1. Typical Materials
- 2. Properties of Materials
- 3. Effects of Evaporation

Evaporation of One of the Phases of an Emulsion

Evaporation of Solvent Plus Polymerisation

- 1. Oxygen Induced Mechanisms
- 2. Heat Induced Polymerisations
- 3. Use of Water as a Curing Agent
- 4. Systems Using Catalysts

Systems Employing Substantial Amounts of Curing Agents

Systems Employing the Solvent as a Film Former

2. CHEMISTRY AND PROPERTIES OF DRYING AND OTHER OILS

### Vegetable Oils

- 1. Origin
- 2. Production of Oils
- 3. Composition of Crude Oils
- 4. Refining

### **Fatty Acids**

- 1. Saturated Acids
- 2. Monoethenoid Acids
- 3. Polyethenoid Acids
- 4. Substituted Acids

### Glyceride Structure and Film Formation

- 1. Fatty Acid Composition
- 2. Fatty Acid Distribution

### Chemical Reactions of Glycerides

1. Ester Reactions

### Industrial Applications of Ester Reactions

- 1. Synthetic Oils
- 2. Fat Splitting
- 3. Alcoholysis

### Reactions Associated with Unsaturation

- 1. Oxidation
- 2. Polymerisation
- 3. Isomerisation
- 4. Hydrogenation
- 5. Reaction with Sulphur
- 6. Reaction with Maleic Anhydride

#### Specific Reactions

- 1. Castor Oil Reactions
- 2. Dehydrated Castor Oil

### Film Properties

- 1. Oily Media
- 2. Varnish Media
- 3. Alkyd Media

### Synthetic Drying Oils

- 1. Hydrocarbon Drying Oils
- 2. Fatty Acid Condensation Products
- 3. CHEMISTRY OF RESIN FORMATION AND ITS

#### **PROPERTIES**

Introduction

Fundamentals of Polymer Formation

- 1. Functions or Reactive Groups
- 2. Classification of Polymers

Formation of Polymers

- 1. Condensation Reactions
- 2. Addition Polymerisation

Types of Polymers

- 1. Polyesters
- 2. Polyamides
- 3. Phenolic Resins
- 4. Amino Resins
- 5. Epoxide Resins
- 6. Vinyl Polymers
- 7. Acrylic Polymers
- 8. Silicones

The Size of Polymer Molecules

- 1. Estimation of Molecular Weight
- 2. Measurement of Mn
- 3. Measurement of Mw
- 4. Viscosity Relationship

Physical Properties of Polymers

- 1. Factors Affecting Tensile Strength
- 2. Cohesive Energy
- 3. Influence of Molecular Order
- 4. Intermolecular Attraction
- 5. Crystallinity
- 6. Achievement of Flexibility

Chemical Properties of Polymers

- 1. Effect of Molecular Weight on Solubility
- 2. Effect of Polymer Structure

Selection and Design of Polymers

- 1. Addition-Condensation Polymers
- 2. Designing for Water Solubility
- 3. Use of Inorganic Ingredients
- 4. Advent of Truly Synthetic Polymers
- 4. PROCESSING OF OIL AND RESIN

General Requirements for Processing Equipment

Materials of Construction

Design of Reaction Kettles

- 1. The Kettle Body
- 2. Branches and Connections

3. Stirring Equipment

Fume Disposal and Scrubbing

- 1. Disposal Systems for General Use
- 2. Water Scrubbing of Anhydride Vapours
- 3. Packed Scrubbers

Condensing and Refluxing

- 1. Condensers for P.F., V.F. and M.F. Resins
- 2. Condensers for Alkyd and Polyester Type Resins

**Ancillary Equipment** 

- 1. Thinning and Blending Tanks
- 2. Instruments
- 3. Vacuum Equipment
- 4. Valves and Fittings
- 5. Inert Gas Pipes
- 6. Pressure and Flow Indication
- 7. Fume Extraction
- 8. Lagging
- 9. Miscellaneous

Heating and Cooling

- 1. Criteria for Selection of Heating and Cooling Systems
- 2. Heating of Low Temperature Products
- 3. Heating at Higher Temperatures
- 4. Fluid Heat Transmission
- 5. Heating by Electricity
- 6. Heating of Pipework and Ancillaries
- 5. INORGANIC PIGMENTS

Introduction

Origins of Pigments

- 1. Comparison of Natural and Synthetic Pigments
- 2. Problems in Producing Natural Pigments
- 3. Pigment Classification

**Pigmentary Properties** 

- 1. Particle Size and Particle Size Distribution
- 2. Particle Shape
- 3. Colour
- 4. Refractive Index

Chemical Engineering Processes of Manufacture

- 1. Precipitation
- 2. Vapour Phase Oxidation
- 3. Heterogeneous Surface Reaction (Corrodibility and

### Corrosion)

- 4. Solid Phase at Elevated Temperature
- Important Groups of Pigments
- 1. Titanium Dioxide Group
- 2. Lead Group
- 3. Zinc Group
- 4. Antimony Group
- 5. Lead Chrome Group
- 6. Chrome Green Group
- 7. Iron Oxide Group
- 8. Iron Blue Group
- 9. Ultramarine Group
- 10. Cadmium Yellow and Red Group
- 6. ORGANIC PIGMENTS

### Important Properties of Organic Pigments

- 1. Light Fastness
- 2. Fastness to Solvents
- 3. Heat Fastness
- 4. Chemical Fastness

### Types of Organic Pigments

- 1. General Classification
- 2. Classification by Chemical Constitution

### **Azo Pigments**

- 1. Monoazo Pigments
- 2. Disazo Pigments

### Non-azo Pigments

- 1. Miscellaneous Products
- 2. Phthalocyanine Pigments
- 3. Vat Pigments
- 4. Miscellaneous Heterocyclic Compounds

### Factors Governing Choice of Organic Pigments

- 1. Hiding Power
- 2. Dispersion
- 3. Stability of Pigmented Systems

### Organic Pigments in Architectural (Decorative)

#### **Finishes**

- 1. Solvent-Based Paints
- 2. Water-Based Paints

### Organic Pigments in Industrial Finishes

1. Air-Drying Industrial Finishes

- 2. Finishes Drying by Solvent Evaporation
- 3. Heat-Cured Industrial Finishes
- 4. Chemically Cured Finishes
- 7. EXTENDERS

#### Introduction

- 1. Production and Manufacture
- 2. Opacity
- 3. Chemical Constitution and Composition

#### Oxides

**Silicas** 

Hydroxides

**Alumina** 

#### Carbonates

- 1. Calcium Carbonate
- 2. Magnesium Carbonate
- 3. Calcium-Magnesium Carbonate
- 4. Barium Carbonate

#### **Silicates**

- 1. Aluminium Silicates
- 2. Calcium Silicates
- 3. Magnesium Silicates
- 4. Asbestos

### Sulphates

- 1. Barium Sulphate
- 2. Calcium Sulphate
- 8. SOLVENTS

#### Introduction

### Characteristics of Solvent Groups

- 1. The Terpenes
- 2. Hydrocarbon Solvents
- 3. Ketones
- 4. Esters
- 5. Glycol Monoethers
- 6. Ethers
- 7. Alcohols
- 8. Halogenated Compounds
- 9. Nitroparaffins

### **Evaluation and Selection of Solvents**

- 1. Solvency
- 2. Tolerance for Non-solvents

- 3. Viscosity of Resin Solutions
- 4. Drying Time
- 5. Final Properties of the Film
- 6. General Conclusions

Solvent Requirements of Specific Resinsâ€"Convertible

### **Systems**

- 1. Oil Varnishes
- 2. Alkyd and Alkyd/Amino Resin Composition
- 3. Silicones
- 4. Acrylic Resins
- 5. Urethanes
- 6. Phenolic Resins
- 7. Epoxy Resins
- 8. Polyester Resins

Solvent Requirements of Specific Resins-Non-

### Convertible Systems

- 1. Cellulose Compositions
- 2. Vinyl Resins
- 3. Acrylic Resins
- 4. Shellac and Other Spirit-Soluble Resins
- 5. Rubber Resins and Derivatives
- 9. PROPERTIES OF SOLVENTS
- 10. PLASTICIZERS

#### Introduction

Molecular Structure of Polymer-Plasticiser Systems

- 1. Effect of Molecular Size
- 2. Types of Polymers
- 3. Identification of Polymer Types

Criteria of Plasticiser Efficiency and Compatibility

#### of Polymers

- 1. The Second-Order Transition Temperature
- 2. Tests to Show Whether A Given Polymer System Can Be Plasticised
- 3. Properties of Concentrated Polymer Solutions
- 4. Compatibility of Resin and Plasticiser
- 5. Vapour Pressure of Plasticisers

**Properties of Plasticised Polymers** 

- 1. Exudation Phenomena and Exudate Composition
- 2. Migration of Plasticisers
- 3. Tensile Strength

- 4. Viscosity of Plasticisers and Its Effects
- 5. Inflammability

The Chemical Types of Plasticisers

- 1. Hydrocarbons
- 2. Esters
- 3. Epoxidised Vegetable Oils
- 4. Polyesters

**Toxicity of Plasticisers** 

- 1. Hydrocarbons
- 2. Halogenated Hydrocarbons
- 3. Alcohols
- 4. Glycols
- 5. Ketones
- 6. Esters-organic
- 7. Esters-Inorganic
- 11. SURFACE ACTIVE AGENTS

Introduction

Types of Surfactants

- 1. Anion Active
- 2. Cation Active
- 3. Ampholytic
- 4. Non-ionic
- 5. Miscellaneous

**Properties** 

- 1. Compatibilities
- 2. Chemical Stability
- 3. Physico-Chemical Characteristics
- 4. Surface and Interfacial Tension

Suspension, Sedimentation and Flocculation

- 1. Factors Governing Sedimentation Rate
- 2. Emulsions

Choice of Surfactant

- 1. Effect of Chain Length
- 2. Hydrophile/Lipophile Balance
- 3. Foaming and Anti Foaming

**Pigment Treatment** 

- 1. Surfactants as Additives in Grinding and Dispersion
- 2. Pigment Pretreatment
- 3. Pigment Flushing

Specific Uses in Paints

- 1. Oil-Bound Water Paints
- 2. Emulsion (Polymerised) Paints
- 3. Adhesion of Paints
- 4. Rheological Properties
- 5. Speciality Paints
- 6. Miscellaneous Allied Applications
- 12. OPTICAL PROPERTIES

Introduction

- 1. Factors Affecting the Appearance of Coatings
- 2. Application of Optical Data

Light Transmission, Absorption and Reflection

Correlation of Light Beam Phenomena

Scattering

Opacity

Types of Transparent Coatings

Methods of Measuring Clarity

Scattering Materials

**Effects of Pigment Properties** 

Reflectance Measurement

Gloss

Gloss Measurement Techniques

Colour

Spectrophotometry

Colorimetry

Alternative Methods of Colour Measurement

Appearance of Coatings

Fluorescence

Fading

Lightfastness Tests

External Influences on Lightfastness

Standards of Lightfastness

13. RHEOLOGICAL CHARACTERISTICS

Introduction

Rheological Behaviour In Liquids

- 1. Newtonian Flow
- 2. Non-Newtonian Flow

Theories of Viscosity

Eyring's Theory

Einstein's Equation

**Molecular Complications** 

Relaxation Mechanisms

Rheological Measurements

- 1. Coaxial Cylinder Viscometer
- 2. Cone-and-Plate Viscometer
- 3. Capillary Flow Viscometers
- 4. Falling Sphere Viscometers
- 5. Efflux Viscometers

**Practical Applications** 

- 1. Brushing Properties
- 2. Sagging and Flow
- 14. EMULSIONS AND OTHER AQUEOUS MEDIA

Introduction

**Emulsion Media** 

**Emulsion Polymerisation** 

Polymerisation

Copolymerisation

Formation of Polymer Emulsions

Particle Charge in Polymer Emulsions

Surface Coating Emulsions

Polyvinyl Acetate and Its Copolymers

Polystyrene

Butadiene/Methyl Methacrylate Copolymers

**Emulsified Resins and Oils** 

Coacervate Emulsions

**Emulsion Paints** 

Film Formation

Composition and Rheology

Solution Media

**Proteins** 

Synthetic Water-Soluble Polymers

Maleinised Oils

Silicates and Siliconates

Solid Cementitious Binders

15. CORROSION

Corrosion of Metals

**Electrochemical Basis of Corrosion** 

Electronic Permeability of the Oxide Film

Permeability of the Oxide Film to Metal Cations

Electrolytic Resistance of the Solution

Effect of an Applied E.M.F.

### **Protective Action of Organic Coatings**

Permeability of Organic Coatings to Oxygen and Water

Permeability of the Oxide Film to Metal Cations

Resistance Inhibition

**Metallic Pigments** 

### 16. FILM PROPERTIES AND DEFECTS

### **Properties**

- 1. Adhesion
- 2. Hardness
- 3. Flexibility
- 4. Film Strength or Cohesion
- 5. Abrasion Resistance
- 6. Water Absorption
- 7. Water Permeability
- 8. Chemical Resistance
- 9. Solvent Resistance
- 10. Heat Resistance
- 11. Colour Retention
- 12. Fungus Resistance
- 13. Durability

#### **Defects**

- 1. Black Spotting
- 2. Blistering
- 3. Bloom
- 4. Blushing
- 5. Bronzing
- 6. Chalking
- 7. Cracking
- 8. Cratering
- 9. Flaking
- 10. Floating and Flooding
- 11. Gas-Checking and Frosting
- 12. Orange Peel
- 13. Ropiness or Ropy Finish
- 14. Seediness
- 15. Sheariness
- 16. Silking
- 17. Sleepiness
- 18. Sulphide Staining
- 19. Sweating

- 20. Wrinkling or Rivelling
- 17. SURFACE PREPARATIONS

#### **Metal Surfaces**

- 1. Iron and Steel
- 2. Aluminium
- 3. Cadmium
- 4. Copper and Brass
- 5. Lead
- 6. Magnesium
- 7. Stainless Steels, Nickel and Chromium
- 8. Tin
- 9. Zinc
- 10. Pretreatment Primer for Metallic Surfaces

#### Wood

- 1. Characteristic Properties
- 2. Preparation for Painting
- 3. Preparation for Varnishing and Lacquering

#### Plaster and Cement Surfaces

- 1. Drying and Priming
- 2. Treatment of Efflorescence
- 3. Control of Drying Out Process
- 4. General Principles
- 5. Asbestos Cement

### Masonry and Building Boards

- 1. Brickwork
- 2. Stone Masonry
- 3. Miscellaneous Building Boards

### Preparation for Repainting

- 1. Removing Old Paint
- 2. Dealing with Contaminated Surfaces
- 3. Schedules of Painting
- 18. APPLICATION TECHNIQUES

#### Introduction

Brush and Roller Application

Use and Maintenance of Brushes

Roller Applicationâ€"Hand

Roller Applicationâ€"Machine

Spray Application

Compressed Air

Spray Guns and Accessories

Metering Spray Equipment

Spray Booths

Hot Spraying

Steam Spraying

Petroleum Solvent Spraying

Cold Hydraulic Spraying

Hot Hydraulic Spraying

**Electrostatic Spraying** 

**Dip Application** 

Slipper Dip

Trichloroethylene Dip

Controlled Extraction

Flood Coating

Flow Coating

**Curtain Coating** 

Barrelling and Centrifugal Application

Stoving

Operation of Stoving Ovens

**Convection Ovens** 

Radiant Heat Ovens

# **About NIIR Project Consultancy Services (NPCS)**

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Prefeasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.

NIIR PROJECT CONSULTANCY SERVICES 106-E, Kamla Nagar, New Delhi-110007, India. Tel: 91-11-23843955, 23845654, 23845886, +918800733955 Mobile: +91-9811043595
