Enzymes Biotechnology Handbook

Code	NI98
Format	paperback
Indian Price	₹1100
US Price	\$125
Pages	490
ISBN	8178330784
Publisher	Asia Pacific Business Press Inc.

Description

Industrial biotechnology is the practice of using cells to generate industrially useful products. An enzyme is a protein that catalyzes, or speeds up, a chemical reaction.

Enzymes are the focal point of biotechnological processes, without them biotechnology as a subject would not exist. The main advantage of enzymes compared to most other catalysts is their stereo, region and chemo selectivity and specificity. Enzymes are responsible for many essential biochemical reactions in micro organisms, plants, animals, and human beings. Biotechnology processes may have potential in energy production, specifically in the substitution of renewable plant biomass for fossil feedstock. This will depend on the development of enzymes able to degrade cellulose in plant biomass and designing methods to recycle or dispose of spent biomass. With time, research, and improved protein engineering methods, many enzymes have been genetically modified to be more effective at the desired temperatures, pH, or under other manufacturing conditions typically inhibitory to enzyme activity (e.g. harsh chemicals), making them more suitable and efficient for industrial or home applications. Enzymes are used in the extraction of natural products, as catalysts in organic chemistry, in clinical analysis, in industrial processes, and so on. The application of enzymes is found in many different fields and it is one of the good sectors to venture. In coming few years it is estimated that world enzyme demand will average annual increases of 6.3 percent.

This book basically deals with principles of industrial enzymology, basis of utilization of soluble and immobilized, enzymes in industrial processes, principles of immobilization of enzymes, enzymes in clinical analysis principles, practical aspects of large-scale protein purification, the applications of enzymes in industry, use of enzymes in the extraction of natural products, data on techniques of enzyme immobilization and bio affinity procedures etc.

In this book you can find all the basic information required on the fundamental aspects of the enzymes, their chemistry, bio chemistry as well as detailed information of their applications a wide variety of industrial processes etc. The book is very useful for research scholars, technocrats, institutional libraries and entrepreneurs who want to enter into the field of manufacturing of enzymes.

Content

1. LARGE-SCALE EXTRACTION AND PURIFICATION OF ENZYMES AND OTHER PROTEINS

Extraction by Chemical Methods

Alkali

Lysozyme and EDTA

Detergents

Cold Shock

Osmotic Shock

Extraction by Physical Methods

Sonication
Freezing and Thawing
Solid Shear
Grinding or Agitation with Abrasives
Liquid Shear
Isolation and Purification
Nucleic Acid Removal
Cetyltrimethyl Ammonium Bromide
Streptomycin Sulphate
Polyethyleneimine
Nuclease Treatment
Concentration by Precipitation
Ammonium Sulphate
Organic Solvents
High Molecular Weight Polymers
Concentration by Ultrafiltration
Concentration by Freeze-Drying
Gel Chromatography
Ion Exchange Chromatography
Ion Exchange Resins
Ion Exchange Celluloses
Other Ion Exchange Gels
Affinity Chromatography
Coupling Techniques
Non-Specific Adsorbents
Hydroxyapatite
Celite
Hydrophobic Interaction Chromatography
High Performance Liquid Chromatography
Electrophoretic Techniques
Electrophoresis.
Isoelectric Focusing
Multimembrane Electrodecentration
Chromatofocusing
Aqueous Two-Phase Separation
2. PRINCIPLES OF INDUSTRIAL ENZYMOLOGY: BASIS OF UTILIZATION OF SOLUBLE AND
IMMOBILIZED
ENZYMES IN INDUSTRIAL PROCESSES
Glossary of Symbols
Assay of Enzyme Activity
Cofactors

The Distinctive Features of Enzymes as Catalysts
Enzyme Catalysis
Enzyme Kinetics
The Effect of pH on Enzyme Activity
The Effect of Temperature on Enzyme Activity
Enzyme Inhibition
The Various Types of Enzymic Catalyst
A Comparison of Enzymes with Chemical Catalysts
A Comparison of Enzymes with Fermentations
Immobilized Biocatalysts
A Comparison of Immobilized Enzymes and Cells
An Assessment of Immobilization Supports and Methods
Characterisation of Immobilized Biocatalysts
Co-Immobilized Enzymes
Two-Phase Reaction
Industrial Enzyme Kinetic
Effects on Equilibria
Effectiveness Factors
Steady - State Kinetics
Intrinsic Activity of Enzymes - Modifying Factors
Introduction
Diffusional Limitations on the Activity of Immobilized
Biocatalysts
External Diffusional Limitations
Internal Diffusional Restrictions
Regeneration of Cofactors
Biochemical Reactors
Introduction
The Various Types of Biochemical Reactor
Assessment of the Performance of Biochemical Reactors
Batch Reactors
Continuous Stirred Tank Reactors
Plug-flow Column Reactors (or Tubular Reactors)
Fluidized Bed Reactors
Electrochemical Reactors
Ultrafiltration Reactors
Enzyme Kinetic in Reactors
Inhibition in Enzyme Reactors
The Effect of Non-Ideal Flow on Biochemical
Reactor Performance
Physical Problems in Biochemical Reactor using

Immobilized Biocatalysts
Abrasion
Compression
Fouling
Microbial Contamination
The Stability of Immobilized Biocatalysts
Introduction
The Stability of Biochemical Reactors Employing
Immobilized Enzymes or Immobilized Cells
Regeneration of Biocatalyst Activities
Constant Productivity with Biocatalyst Reactors
Scale-Up
Discussion
3. PRINCIPLES OF IMMOBILIZATION OF ENZYMES
Classification of Immobilized Enzymes
Techniques of Enzyme Immobilization
Entrapment
Gel Entrapment
Fibre Entrapment
Micro-encapsulation
Carrier Binding
Physical Adsorption
Ionic Binding Method
Chelation or Metal Binding
Covalent Binding
Crosslinking
Immobilized Soluble Enzymes
Immobilization without Enzyme Derivatization
Immobilization with Enzyme Derivatization
Miscellaneous Methods
Choice of Immobilization Method
Outline of Properties of Immobilized Enzymes
Stability
Kinetic Properties
Outline of Enzyme Reactors
Batch Reactors
Continuous Reactors
Application and Future Trends
Analytical Applications
Enzyme Electrodes
Automated Analysis

Therapeutic Applications

Enzyme Replacement

Enzyme Therapy

Industrial Applications

Future Trends

4. ENZYMES IN CLINICAL ANALYSIS - PRINCIPLES

Measurement of Substrate Concentration with Enzymes

Principles of Equilibrium Methods

Principles of Kinetic Methods

Comparison of Equilibrium and Kinetic Methods

Common Indicator Species Used in Routine Clinical Analysis

Nicotinamide Adenine Dinucleotides

Oxygen and Hydrogen Peroxide

Measurement of Enzymes

Principles of Enzyme Assay Using Coupled Enzymes

Immobilized Enzymes for Measuring Substrate

Concentrations

Immobilized Enzyme Reactor Tubes

Bioanalytical Probes

Dry Reagent Chemistry

Enzyme Immunoassay (ELA)

Preparation of Enzyme Labels

Homogeneous EIA

Heterogeneous EIA

Choice of Enzyme Label

Assay in EIA

Simultaneous Assay of Two Haptens

The Future

5. PRACTICAL ASPECTS OF LARGE-SCALE PROTEIN

PURIFICATION

Enzyme Inactivation

Containers and Ancillary Equipment

Glass Vessels

Metal Vessels

Plastic Vessels

Liquid Transfer

Couplings

Pumps

Bacterial Disruption

Resuspension

Liquid Shear

Grinding
Centrifugation
Batch Centrifuges
Continuous Flow Centrifuges
Disc Type Centrifuge
Hollow Bowl Centrifuges
Basket Centrifuges
Tangential Flow Filtration
Concentration
Ultrafiltration
Stirred Cells
Thin Channel Systems
Cartridge Membranes
Hollow Fibres
Dialysis
Chromatography
1 Columns
Gel Chromatography
Ion Exchange Chromatography
Affinity Chromatography
6. THE APPLICATIONS OF ENZYMES IN INDUSTRY
Glossary of Terms
Production of Enzymes
Use of Enzyme - General Comments
The Characteristics of Industrial Enzymes
Sources of Enzymes
The Isolation, Purification and Formulation of Enzymes
Legislation on the Use of Enzymes
Enzyme Manufacturers
Biochemical Applications
Use of Enzymes in Analysis
General
In Clinical Assays
Medical Uses of Enzymes
The Use of Enzymes as Catalysts in Organic Chemistry
Introduction
Stereospecificity of Enzymes
Prochiral Stereospecificity
Combinations of Stereospecificity
Multiple-Step Reactions
Synthesis of Radioactive Compounds

Restriction Endonucleases
Biochemical Processing
Applications of Enzymes in the Food Industry
Polysaccharide Processing
Bacterial α -amylase
Amyglucosidase (EC 3.2.1.3)
Maltose Syrups
Glucose Isomerase (EC 5.3.1.5)
Inversion of Sucrose
Sugar Refining
Raffinase
 α -amylase
Dextranase (EC3.2.1.11)
Debranching Enzymes
Cyclodextrin Glucosyltransferase and Other Amylases
Cellulase (EC3.2.1.4)
Ethanol Fermentation
Brewing
Baking
The Dairy Industry
Lactose Hydrolysis
Cheese Manufacture
Coagulation
Flavour Development
Other Applications
Organic Acids
Amino Acids
Introduction
Enzymic Resolution
Enzymic Production of Amino Acids
Antioxidant
Introduction
Glucose Oxidase (EC 1.1.3.4)
Protein Processing
Introduction
The Plastein Reaction
Aspartame
Others
Flavouring Agents
Fruit Processing
Use of Enzymes in the Extraction of Natural Products

Detoxifying Enzymes
Enzyme-Based Detergents
Use of Enzymes as Cleansing Agents
The Leather Industry
Textiles
Paper Manufacture
Antibiotics
Penicillin Acylase, (EC 3.5.1.11)
Cephalosporins
Miscellaneous uses of Biocatalysts
Conclusion
Note in Proff
Acrylamide
Propylene Oxide
Vinyl Chloride
Biosensors
Amino Acids

7. DATA ON TECHNIQUES OF ENZYME IMMOBILIZATION AND BIOAFFINITY PROCEDURES

Entrapment
Gel Entrapment
Fibre Entrapment
Microencapsulation
Phase Separation Method
Interfacial Polymerization Method
Liquid Surfactant Membrane Method
Liquid Drying Method
Chelation or Metal Binding
Covalent Binding
Diazotization
Amide Bond Formation
Acid Anhydride Derivatives
Acylazide Derivatives
Cyclic Imidocarbonate Derivatives
Isocyanate and Isothiocyanate Derivatives
Acyl Chloride Derivatives
Cyclic Carbonate Derivatives
Condensing Reagents
Alkylation and Arylation
Schiff's Base Formation
Ugi Reaction

Amidination Reactions
Thiol-Disulphide Interchange
Mercury-Enzyme Interactions
-Irradiation Induced Coupling
Matrices for Carrier Binding
Inorganic Supports
Controlled Pore Supports
Other Porous Supports
Non-porous supports
Coupling Reactions for Inorganic Supports
Organic Supports
Polysaccharides
Proteins
Carbon
Polystyrenes
Polyacrylates
Maleic Anhydride Based Copolymers
Polypeptides
Vinyl and Allyl Polymers
Polyamides
Crosslinking
Immobilized Cells
Entrapment
Physical Adsorption
Chelation or Metal Binding
Covalent Binding
Crosslinking
Other Immobilized Biologically Active Molecules
Immunoabsorbents
Affinity Chromatography Media
Immobilized Lactins
Immobilized Amino Acids and Peptides
Immobilized Carbohydrates
Immobilized Nucleosides, Nucleotides and Nucleic Acids
Immobilized Antibiotics
8. ENZYMES IN CLINICAL ANALYSES - DATA
Substrates Measured Enzymically in Clinical Laboratories
Enzymes Measured by Coupled Enzyme System in
Clinical Laboratories
Immobilized Enzymes for Measuring Substrates
Enzymes Used in Enzyme Immunoassay (EIA)

About Niir

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and/or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry. NPCS also publishes various technology books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists, and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureaus, consultants and consultancy firms as one of the inputs in their research.
