

Best New Business Ideas for Startup (NPCS Newsletter – 022016)

Description:

Projects Covered In This Issue:

SolidWaste Management: Due to rapid increase in the production and consumption processes, societies generate as well as reject solid materials regularly from various sectors – agricultural, commercial, domestic, industrial and institutional.

BiomedicalWaste Recycling: Biomedical waste is waste that is either putrescible or potentially infectious. Biomedical waste may also include waste associated with the generation of biomedical waste that visually appears to be of medical or laboratory origin (e.g., packaging, unused bandages, infusion kits, etc.).

PlasticWaste Recycling Plant: Waste is now a global problem, and one that must be addressed in order to solve the world's resource and energy challenges. Plastics are made from limited resources such as petroleum, and huge advances are being made in the development of technologies to recycle plastic waste among other resources.

Bricks from Fly Ash: Fly Ash is a burnt residue of pulverized coal (bituminous or sub-bituminous) and is siliceous in nature. In past few decades, R&D efforts were undertaken and it has been proved that this material can be utilized in number of ways in building construction products as well as in civil works with adequate durability.

Benzoic Acid: Today, benzoic acid is produced by oxidation of toluene with air, which has displaced dichromate and nitric acid oxidation processes.

Bio-Degradable Plastic Polymer from Corn: Polymer, that are cheaper and lighter than many materials, are being favored for industrial and commercial applications. Plastics are necessary in daily life experience, using them in household appliances, cars, packages etc.

FreezeDried Vegetables: Freeze-drying, technically known as Lyophilization, is a process of sublimation where water molecules in a solid phase are directly converted to
