

Optical Fiber Cable Production Industry

Description:

Optical Fiber Cable Production Industry. Fiber-Optic Cable Manufacturing Industry.

Fiber optic cable is a high-speed data transmission medium. It contains tiny glass or plastic filaments that carry light beams. Digital data is transmitted through the cable via rapid pulses of light. In recent years, fiber optic technology has become increasingly popular for local Internet connections as well.

Fiber Optics, also called optical fibers, are microscopic strands of very pure glass with about the same diameter of a human hair. Thousands of these optical fibers are arranged in bundles in optical cables and are used to transmit light signals over long distances. The bundles are protected by a jacket, which is the cable's outer covering.
