

Waste Paper Recycling, Paper from Waste Paper, Paper Recycling Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Manufacturing Process, Machinery, Raw Materials, Feasibility Study, Investment Opportunities

Description:

The Indian paper industry is one of the traditional industries of India consisting of over 500 units with an installed capacity (excluding newsprint) of over 7.5 mn tonne per annum. The capacity utilisation in the industry has remained low at approximately 60% but has lately picked up. This was owing partly to some 200 mills being small and many of which were sick. Effectively, only 321 mills are operational. Out of these, 172 mills make up for 54% of the market, with the top ten claiming a share of over 28%. The large segment consists of 21 large mills. The incidence of sickness is high in mills with less than 15,000 tpa capacity.

The consumption of paper products is growing at a fast pace of around 6.5% and is expected to further go up in future. The industry now uses three sources of raw materials - recycled paper, wood and agro based, and waste. The recycled paper, comparatively cheaper, comprises almost 40% of the total raw material requirements at present.
