

Production of White Petroleum Jelly from Crude Oil.

Description:

Production of White Petroleum Jelly from Crude Oil. Profitable Investment Opportunities in Petroleum Sector.

[Petroleum Jelly](#) is a semi-solid mixture of hydrocarbons, at first promoted as a topical ointment for its healing properties. [Petroleum](#) jelly is a flammable, semi-solid aggregate of hydrocarbons, having a melting-point generally within a few tiers of 75°C. It is colorless, or of a light yellow color, translucent, and devoid of flavor and scent while pure.

White [petroleum](#) jelly could be a non-polar organic compound hydrophobic and insoluble in water, alcohol (not an organic compound however Associate in Nursing alcohol) is that the opposite petroleum jelly is therefore powerfully hydrophilic that by continuous absorption of wetness from the air, it produces the sensation of wetness on the skin, almost like the greasiness. The feeling is comparable, however white petroleum jelly repels water, and glycerin attracts it.
