

Investment Opportunities in Production of Downhole Seals

Description:

Investment Opportunities in Production of Downhole Seals Used for Oil and Gas Industry from Synthetic Rubber.

The primary purpose of using [Downhole](#) tools is to carry out work over operations and well completion method as well as examining the reservoir properties similar to rock, sand, liquid by conveying their sample on the well surface. They are mostly used during extreme temperatures and pressure conditions.

[Downhole](#) Tools refer to the equipment utilized in many operations like the production of oil and gas, well drilling, well interventions and well completions. To carry out these activities, many Downhole Tools similar to roller centralizers, drilling jars, drag friction, shock tools, fishing tools, cannular tools and drill pipes are used. These tools are used in the bottom whole assembly for work over operations and well completions. They're mostly used during extreme temperatures and pressure conditions.
