

Essential Oil Processing Unit Establishment Plan

Description:

Essential Oil Processing Unit Establishment Plan. Essential Oil Extraction (Lemongrass, Citronella, Lavender, Rosemary and Peppermint)

An [essential](#) oil may be a concentrated hydrophobic liquid containing volatile (easily evaporated at normal temperatures) chemical compounds from plants. Essential oils also are referred to as volatile oils, ethereal oils, aetherolea, or just because the oil of the plant from which they were extracted, such as oil of clove. An essential oil is "essential" within the sense that it contains the "essence of" the plant's fragrance—the characteristic fragrance of the plant from which it's derived. The term "essential" used here doesn't mean indispensable or usable by the human body, like the terms essential amino acid or essential fatty acid, which are so called because they're nutritionally required by a given living organism.
