

Investment Opportunity in Production of Cellulose (Cellulosic) Fibers

Description:

Investment Opportunity in Production of Cellulose (Cellulosic) Fibers. High Demand in the Textile and Industrial Segment.

Cellulose fibers are fibers made with ethers or esters of cellulose, which may be obtained from the bark, wood or leaves of plants, or from other plant-based material. Additionally to cellulose, the fibers can also contain hemicellulose and lignin, with different percentages of those components altering the mechanical properties of the fibers. The most applications of cellulose fibers are within the textile industry, as [chemical](#) filters, and as fiber-reinforcement composites, thanks to their similar properties to engineered fibers, being an alternative choice for bio composites and polymer composites.
