

IV Fluids (BFS Technology) Manufacturing Plant. Investment Opportunities in Pharma Sector.

Description:

IV Fluids (BFS Technology) Manufacturing Plant. Investment Opportunities in Pharma Sector.

Water, sugar, and salt are all necessary for the body to function properly. Intravenous fluids (sometimes abbreviated as 'IV' fluids) are liquids administered to replace water, sugar, and salt that you may require if you are ill or undergoing surgery and are unable to eat or drink normally. IV fluids are injected directly into a vein through a drip. It is critical for appropriate patient care to ensure that everyone in the hospital receives the proper amount of hydration.
