

Indias Chemical Industry Sector Overview

Description:

In India, the Chemicals and Petrochemicals sector is worth \$178 billion.

The Indian chemical industry refers to the production of chemicals and chemical products in India. The major areas of chemical production are petrochemicals, agrochemicals, pharmaceuticals, polymers, industrial gases, etc. The Indian Chemical Industry is mainly driven by India's domestic market and internal demand, although it also exports globally. It has grown over the years as an important cog in the machinery of India's economy, as it contributes substantially to the export earnings of the country.
