

Formulas and Production Process of Surfactants, Disinfectants, Cleaners, Toiletries, Sanitizers, Antibacterial and Beauty Products, Personal Care Products, Health Care Products (Body Lotion, Hair Gel, Floor Cleaner, Phenyl, Glass Cleaner, Liquid Deterge

Description:

Household Cleaners are Some of The Most Widely Purchased Consumer Products. Other Than Plastic and Synthetic Fibers Materials, There is Probably Not another Class of Chemical Products that People Come into Contact With More Frequently. We Buy Them in Grocery Stores, Store Them in our Homes, Use Them Where We Eat, Sleep, Bathe, and Work, and Dispose of Them Down The Drain After Use.

The Term Surfactant Comes from the Words Surface Active Agent. A Surfactant is Briefly Defined as a Material that Can Greatly Reduce the Surface Tension of Water when Used in Very Low Concentrations. Surfactants, or Surface Active Ingredients, are the Wetting and Foaming Agents Which form The Basis for Most Aqueous Cleaners. Anionic, Nonionic, And Amphoteric Surfactants are Used Mainly for Cleaning. Cationic Surfactants are often used as Antimicrobials. The Surfactants Market Size is 30.64 Billion in 2016 and is projected to Reach USD 39.86 Billion by 2021, registering a CAGR of 5.4% between 2016 and 2021.

The Global Surfactants Market is expected to Reach t Valuation of US\$28.8 Billion By 2023, Increasing at a 4.20% CAGR upon its 2014 Value of Close to US\$20.3 Billion.

Antimicrobial Ingredients Were Found in a Number of Products. As Was the Case with General Purpose Cleaners, Quaternary Ammonium Compounds Were Most Common. Also Found Were Sodium Hypochlorite and Phenolic Derivatives.
