

Opportunities in Industrial Biotechnology (Whisky, Soybean Foods, Cheese, Lyine, Tryptophan, Aspartic Acid, Citric Acid, Acetic Acid, Gluconic and Itaconic Acids, Lactic Acid, Glucose Isomerase, Ethanol, Acetone and Butanol, Enzymes, Antibiotics, Biogas,

Description:

Biotechnology is a field of applied biology that involves the use of living organisms and bioprocesses in engineering, technology, medicine and other fields requiring bio products. Biotechnology also utilizes these products for manufacturing purpose. Modern use of similar terms includes genetic engineering as well as cell and tissue culture technologies. Biotechnology draws on the pure biological sciences and in many instances is also dependent on knowledge and methods from outside the sphere of biology. Conversely, modern biological sciences are intimately entwined and dependent on the methods developed through biotechnology and what is commonly thought of as the life sciences industry. It has a major application in modern brewing technology which includes the production of whisky, traditional fermented soybean foods bacterial biomass, cheese starters, cheese technology, L glutamic acid fermentation etc. Biotechnology and cell molecular biology have developed and emerged into a major discipline during last two decades. Biotechnology is also used to recycle, treat waste, microbial treatment and utilization of waste. The growing global demand for biotechnology products, India has rich biodiversity that drives its clinical trials industry and forms a strong base for pharmaceutical research. In recent years, the worldwide biotechnology based products market has grown at an annual average rate of 15%.
