

Nicotine Extraction from Tobacco Waste, Waste Utilization, Products from Waste, Nicotiana tabacum, Duboisia hopwoodii and Asclepiassyriaca Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Man

Description:

Tobacco is grown with assistance of man as a leaf as the most valuable part of the plant. Tobacco is primarily used for cigarette, Cigars, chewing tobacco and snuff. Other products from tobacco include Beedi and Hookah and are typically Indian products with 90% of production coming from India. Nicotine is a hygroscopic, oily liquid that is miscible with water in its base form. Nicotine is a volatile alkaloid. Nicotine is by far the most important by-product derived from tobacco waste. The applications and uses of nicotine are: agricultural insecticide, manufacture of nicotine acid and nicotinamide, used in medicines, tanning industry. The most important among the alternate applications for tobacco at present is for the manufacture of Nicotine for use in the preparation of Smoking cessation products.
