

Honey Production, Grading, Processing, Packaging & Commercial Marketing

Description:

Honey is the most popular natural sweetener in the world and the global trade in bee products is worth millions of dollars every year. Due to its diverse use, the worldwide consumption of honey is so huge that supply can barely cope with demand.

Bee products are used in various foods and also enjoy extensive use in several industries including medicine, food processing, industrial manufacturing and natural healing.

Honey is the sweet tasting juice (food) produced by honey bees, popular for its taste and flavor. Due to its natural sweetness and chemical properties, it is preferred over processed sugars and other sweeteners used in baking, beverages and foods. Honey consists essentially of different sugars, predominantly glucose and fructose. Besides, honey contains protein, amino acids, enzymes, organic acids, mineral substances etc. The colour of honey varies from nearly colorless to dark brown. The flavor and aroma vary but are usually derived from its plant origin. In medicine, honey is used as a sweetening agent for children's drugs and the treatment of sore throat, cough, hay fever and burns.
