

# Tyre Retreading Business

## Description:

### Tyre Retreading Business. Retread Tire. Start an Automobile Tyre Retreading Industry

Retreading tires is the process of restoring old tires so that they can be used in automobiles. The process is technology-driven where the worn-out and damaged threads are replaced with new treads. Tyre retreading can be done using 2 methods – cold process and hot process. Currently in India retreading is done 50% by the organized sector and the remaining 50% by the unorganized sector.

Tyre Retreading is a new technology. After applying this method the old tyres become serviceable and usable. The part of the tyre that comes in contact with the surface of the road is known as the tread. The tread is an integral part of the tyre and is responsible for providing traction. New treads are available in the market. In brief, it can be put on an old tyre and cured with the help of steam. Similar to the new tyres, the treated tyres can be very well used on all vehicles, irrespective of light or heavy vehicles. With a safe and new technology, which is being adopted nowadays, it will be more easy and economical to produce tyres. Recently a new technology has been developed called “Precured Tread Rubber Retreading Process” which is commonly known as “Cold Process Retreading”.

As in most parts of the world, tyre retreading in India is done extensively for commercial vehicles such as trucks and busses. The primary reason for retreading tyres is to save operational costs as applying a new tread can be done at less than half the cost of a new tyre. With further growth of the economy, there will be an increased numbers of vehicles in transport as well as passenger vehicles and hence more tyres will be required.
