

NC Thinner Manufacturing Business

Description:

NC Thinner Manufacturing Business. Production of Nitro Cellulose (N.C.) Thinner

N.C. Thinner is Nitro cellulose thinner. It is a mixture of esters, glycol, alcohol, aromatic solvents and ketones suitable diluents to all nitro products. It is manufactured for reducing lacquers before they are applied by different methods. Mainly used for solvent based nitro product. The thinner is best suited to all paints and coating that are nitro-based. It has been blended in exact proportion to reduce the lacquers before they are used on the intended surface.

Used for cleaning purpose as well as in paint thinners. Normally paint thinner is used to remove oil-based paint from brushes, rollers, equipment, and surfaces.

N.C. Thinner is used as a diluents in all nitrocellulose based coatings in all proportions.

- Paint industry
- Rubber industry
- Ceramic industry
- Textile industry
- Detergent & plastics industry
