## Description:

### Electric Motor Rewinding Business. Emerging Investment Opportunities in Rewinding of Burnt Electric Motors Industry

An electric motor is an electrical machine that converts electrical energy into mechanical energy. Electric motors can be powered by direct current (DC) sources, such as from batteries, motor vehicles or rectifiers, or by alternating current (AC) sources, such as a power grid, inverters or electrical generators. The types of Electric motors are available in three main segments like AC motor, DC motor, & special purpose motors. Almost all domestic vacuum cleaners utilize an AC series-wound electric motor to spin the fan that generates suction and airflow.
