

Bio-Based and Biodegradable Plastics Production

Description:

Bio-Based and Biodegradable Plastics Production. Profitable Business Ideas on Biodegradable Products Manufacturing.

The non-biodegradable plastic products, which are commonly used in households, cannot be recycled for 400 years. Products like plastic carry bags, if disposed unscientifically, are hard to decompose and are a massive threat to soil cultivation.

Biodegradable substances are those that degrade or break down naturally. Materials like plants, animals, their waste, paper, fruits, flowers, vegetables fall under biodegradable substances, on the other hand, rubber, plastic, chemicals, paint plastic falls under the category of the non-biodegradable items.
