

# Processing, Manufacturing of Coconut based Products (Coconut Oil, Coconut Cream, Coconut Milk and Milk Products, Coconut Spray Dried Milk Powder, Coconut Byproducts, Coconut Shell Charcoal, Activated Carbon, Shell Flour, Coir and Coir Products, Handicraft

## Description:

Coconut seems to have a special place in Primal hearts. Judging from the forums, people are pretty taken with the fatty pseudo-nut and they're always interested in new ways to consume the stuff. For some who abstain from dairy completely, coconut products make a great replacement for creams and butters.

Coconut and coconut based products sector plays a pivotal role in the foreign exchange earnings by offering a wide array of products to the international market. The coconut is a very useful plant with a wide range of products being sourced from it. Coconut products are used to make everything from clothing to animal feed to beauty creams. Its kernel is harvested for its edible flesh and delicious water, while its husk is used for its strong fibers. Most important, however, are its oils, which are extracted, processed, and marketed for culinary, medicinal, and cosmetic uses alike. Typically, the flesh is first dried down to 6% moisture to make copra. This product is then hauled to factories across the world where it is manufactured into oil.

Demand for coconuts has grown upwards of 500% in the last decade. This is because coconut-based derivatives, such as soaps, virgin coconut oil, health products and coconut water, have all seen large spikes in demand, so much so that producers may not be able to keep up. The Philippines is requesting international help to streamline their production protocols, and the international community has responded by taking steps to reduce demand for coconuts.
