

Printing Industry: One of the Biggest and Fastest Growing Sector in India (Printing Press, Printing Processing, Offset Press, Printing and paper Technology, Modern Printing Processes, Gravure Printing, Bar Coding)

Description:

Printing plays a significant role in the India. Printing, means of producing reproductions of written material or images in multiple copies. The printing industry includes establishments primarily engaged in printing text and images on to paper, metal, glass, and some apparel and other materials. Printing can be divided into three distinct stages: prepress, the preparation of materials for printing; press or output, the actual printing process; and post press or finishing, the folding, binding, and trimming of printed sheets into their final form. Printing and Print – Packaging industry in India is growing; people are taking keen interest in this key industry now.

The printing industry, like many other industries, continues to undergo technological changes, as computers and technology alter the manner in which work is performed. Many of the processes that were once done by hand are becoming more automated, and technology's influence can be seen in all three stages of printing. The most notable changes have occurred in the prepress stage. Instead of cutting and pasting articles by hand, workers now produce entire publications on a computer, complete with artwork and graphics. The printing industry is also taking on new tasks that provide further value for customers. This means customers can now have their finished products labeled, packaged, and shipped directly by printing companies.
