

# Great opportunities in production of Linear Alkyl Benzene Sulphonic Acid (LABSA)

**Description:**

## Great opportunities in production of Linear Alkyl Benzene Sulphonic Acid (LABSA)

Inorganic chemistry's linear alkyl benzenesulfonate is a valuable commodity. Sulfonation of linear alkyl benzene yields alkyl benzene sulfonate, which is used to make detergents and surfactants for ore flotation. For penoizol, it's used as a foaming agent. Although the LABSA has been around for 75 years, its widespread use began in the 1960s due to its excellent primary biodegradability.
