

# Emerging Investment Opportunities in Production Business of Baby Diaper (T-shape and Pull-up Pants)

**Description:**

## Emerging Investment Opportunities in Production Business of Baby Diaper (T-shape and Pull-up Pants)

A baby diaper is a more sophisticated version of a nappy made of cotton and absorbent material that absorbs the waste material of the baby without making him feel wet after passing discharges. It keeps the baby's delicate skin dry and moisturized. It often lessens the incidence of rashes on the baby's face. Parents all over the world use baby diapers safely every day. Plastic outer skirts, ill-fitting terry cloth inners, and chronically wet skin for babies and infants are long gone.
