

Dairy Farming to Produce Milk and Cattle Breeding Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Feasibility Study, Investment Opportunities, Cost and Revenue, Plant Economics, Working Capital Requirement, Plant

Description:

India has the largest Cattle and Buffalo population in the world. Considerable importance was given to the Livestock Development Programme for increasing the production of major products such as milk, meat, wool & egg etc. to increase the income of the economically weaker sections of the community i.e. small farmers, marginal farmers and Agricultural Labourers. One of them in the field of Animal Husbandry is Cattle Breeding. Cattle are normally bred during the summer so that calving may occur the following spring. However, cattle breeding can occur at other times of year, such as late summer to early fall. Owners can select the breeding time based on a number of factors, including reproductive performance and seasonal cattle pricing.

Breeding to meet the demand for beef production, owners also use selective breeding to attain specific traits in their beef cattle. An example of a desired trait could be leaner meat or resistance to illness. Breeds known as dual-purpose breeds are also used for beef production. These breeds have been selected for two purposes at once, such as for both beef and dairy production.

Dairy farming is a large unorganized sector in India and a major source for livelihood in rural areas. Dairy farming is a class of agriculture for long-term production of milk, which is processed (either on the farm or at a dairy plant, either of which may be called a dairy) for eventual sale of a dairy product. Commercial and small scale dairy farming in India is no doubt playing an important role in the total milk production and economy of our country. And almost all regions of India are suitable for setting up dairy farming business. Dairy cow farming means 'raising highly milk productive cows commercially for milk production purpose'. It's absolutely apart of agriculture or animal husbandry, enterprise for long term milk production from cows. Commercial dairy cow farming business is not a new idea. People are raising dairy cows for milk production from the ancient time. Dairy cow farming business is still a profitable business venture throughout the world. There are numerous new and established dairy cow farms available around the world.
