

Most Profitable Manufacturing Business of PVC Edge Band Tape plant (used in Furniture Manufacture), Investment Opportunity, Plant Economics and Project Financials.

Description:

Most Profitable Manufacturing Business of PVC Edge Band Tape plant (used in Furniture Manufacture), Investment Opportunity, Plant Economics and Project Financials.

PVC edge banding is a thin material that is used to protect plywood's exposed and raw edges. On one side, heat sensitive adhesive is applied to the board, while the other side serves as a dirt and moisture barrier. PVC edge banding is used to cover plywood sides to match the finished look of a cabinet, but it also prevents the inner plywood from warping.
