

Set up your own Zinc Sulphate Manufacturing Plant Highly Profitable Business Opportunity

Description:

Zinc sulphate, ZnSO_4 , is the most common of zinc salts. Zinc sulphate occurs naturally as the mineral calamine, and has been used ancient times as both an alchemical reagent and traditional medicine, primarily in Asia and Europe. Production of zinc sulphate starts with the mining of zinc ore, followed by heating to extract the zinc in the form of oxide or hydroxide. The oxide or hydroxide is then dissolved in sulfuric acid, followed by crystallization and filtering to produce the final product.
