

Calcium Propionate Manufacturing Industry. Production of Calcium Propanoate

Description:

Calcium propionate is a food preservative and mold inhibitor used in baked goods, candy, condiments, pickles, cheese, butter and other processed foods. It inhibits the growth of yeasts, molds and bacteria in these products by preventing water activity. Most often it's used to inhibit mold growth in breads and cakes because of its high level of potency against mold spores and ability to prevent moisture absorption by the food item.
