

# **Production of Paracetamol (Acetaminophen) Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Manufacturing Process, Machinery, Raw Materials, Feasibility Study, Investment Opportunities, Cost an**

## **Description:**

Paracetamol, also known as acetaminophen or APAP, is a medication used to treat pain and fever. It is typically used for mild to moderate pain. The quality of the evidence regarding the use for fever relief in children is poor. It is often sold in combination with other ingredients such as in many cold medications. In combination with opioid pain medication, paracetamol is used for more severe pain such as cancer pain and after surgery. It is typically used either by mouth or rectally but is also available intravenously. Effects last between two and four hours.

Paracetamol lacks anti-inflammatory action in rheumatic disorders. However, it is less toxic than the Aspirin and does not produce anemia and liver damage, which sometimes result from the continued use of acetanilide and acetophenotidine. It is also an important intermediate in the manufacture of other pharmaceuticals like the antimalarial amodiaquine.

## **Few Indian Major Players are as under:**

- Alta Laboratories Ltd.
- Granules India Ltd.
- HaffkineAjintha Pharmaceuticals Ltd.
- Pan Drugs Ltd.
