

# Sweat Free and Antibacterial Socks Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Manufacturing Process, Machinery, Raw Materials, Feasibility Study, Investment Opportunities, Cost and Reven

## Description:

A sock is an item of clothing worn on the feet and often covering the ankle or some part of the calf. The foot is among the heaviest producers of sweat in the body, as it can produce over 0.12 l of perspiration per day; socks help to absorb this sweat and draw it to areas where air can evaporate the perspiration.

Socks can be created from a wide variety of materials such as, cotton, wool, nylon, acrylic, polyester, olefins, (such as polypropylene), or spandex. To get an increased level of softness other materials that might be used during the process can be silk, bamboo, linen, cashmere, or mohair.

## Market Outlook

Only 2 per cent of population in India wears socks and therefore, 98 per cent market is yet to be exploited. A sock is an item of clothing worn on the feet. The foot is among the heaviest producers of sweat in the body, as it is able to produce over a pint of perspiration per day. Socks help to absorb this sweat and draw it to areas where air can evaporate the perspiration. In cold environments, socks decrease the risk of frostbite.

The global socks market was valued at USD 5.6 billion in 2014, expected to increase at a CAGR of 8.5% from 2015 to 2023. The overall socks market stood at a valuation of US\$5.6 bn in 2014 and is expected to be worth US\$11.6 bn by 2023.
