Description:

The global foodservice disposables market is experiencing rapid growth, linked to growing online food ordering and home delivery services. Increasing consumer concern regarding hygiene is the most important factor driving the growth of the disposable food containers industry. Along with hygiene, comes the convenience of carrying food in lightweight packaging. For a better understanding and analysis of the industry, the market has been segmented on the basis of raw material, product type, end use and region. Foodservice disposables provide restaurants and institutions with a myriad variety of attractive and functional designs for packaging.

A disposable (also called disposable product) is a product designed for a single use after which it is recycled or is disposed as solid waste. The term often implies cheapness and short-term convenience rather than medium to long-term durability. The term is also sometimes used for products that may last several months (e.g. disposable air filters) to distinguish from similar products that last indefinitely (e.g. washable air filters). The word "disposables" is not to be confused with the word "consumables" which is widely used in the mechanical world. In welding for example, welding rods, tips, nozzles, gas, etc. are considered to be "consumables" as they only last a certain amount of time before needing to be replaced.

Paper Cups

A paper cup is a disposable made out of paper and after lined with plastic or wax to prevent liquid from leakage out or soaking by paper. Paper cups are made from renewable resources. The cups should be made from food grade paper which are hygienic in nature. It is capable for holding both hot & cold liquid for longer time. The uses of paper cups have wide range. Give the rapid changes in life style, it is the right time to enter the consumer segment to popularize the home consumption of paper cups. The growth prospects are huge in paper cup industry.
