

Extraction of Curcumin from Turmeric (Curcumin Longa, Phytochemicals, Curcuminoid of Turmeric (Curcuma Longa), Spice Oleoresins, Spice Oils and Oleoresins, Curcuma) Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Mar

Description:

Curcumin is a component of the Indian spice turmeric (*Curcumin longa*), a type of ginger. Curcumin is one of three curcuminoids present in turmeric, the other two being desmethoxycurcumin and bis-desmethoxycurcumin. These curcuminoids give turmeric its yellow color and curcumin is used as a yellow food colorant and food additive.

Curcumin is obtained from the dried rhizome of the turmeric plant, which is a perennial herb that is cultivated extensively in south and Southeast Asia. The rhizome or the root is processed to form turmeric which contains 2% to 5% curcumin.

Curcumin is the main biologically active photochemical compound of Turmeric. Turmeric is a spice derived from the rhizomes of *Curcuma longa*, which is a member of the ginger family (*Zingiberaceae*). Rhizomes are horizontal underground stems that send out shoots as well as roots. The bright yellow color of turmeric comes mainly from fat-soluble, polyphenolic pigments known as curcuminoid.

Market Outlook

India is one of the largest producer and exporter of spice oleoresins.

India controls 60% of the 13,500-tonne global spice oleoresins market even as China has emerged as a strong contender in paprika oleoresin, the most in-demand spice oil.

The Indian spice oleoresin market is about Rs.600 crores. India accounts for 70% of the world oleoresin production with competition from China, US, Lanka, South Africa and Latin America. Brazil, China and India are the market leaders. Kochi in Kerala with its spice farms is the hub of oleoresin manufacturing.
