

How to Start a Dairy Farm Business in India. Production Process of Dairy Products. Dairy Products with Cattle Breeding

Description:

Dairy farming is a type of agriculture that is focused on producing milk. This is different from raising animals to produce meat. Milk can be used to produce dairy products, including cheese. Species commonly used are cows (so-called dairy cows), but goats, sheep and camels are also used. Sometimes donkeys are used to produce an alternative to cows' milk for babies. Some babies can digest donkeys' milk better than cows' milk.

Producing milk has been part of farming for a long time. In the last century, farms have become more specialised. In the 20th century, some farmers started with farms that only produce milk.

Dairy farming is a large unorganized sector in India and a major source for livelihood in rural areas. Dairy farming is a class of agriculture for long-term production of milk, which is processed (either on the farm or at a dairy plant, either of which may be called a dairy) for eventual sale of a dairy product. Commercial and small scale dairy farming in India is no doubt playing an important role in the total milk production and economy of our country. And almost all regions of India are suitable for setting up dairy farming business. Dairy cow farming means 'raising highly milk productive cows commercially for milk production purpose'.

Milk Production in India has increased manifold and in the last financial year, the total milk production in the country crossed the mark of 140 Million Tonnes. Milk is used as a food. It is used to prepare curd, butter, ghee cream and ice cream etc.
