

Projects on Cold Storage

Description:

Projects on Cold Storage: Multipurpose Cold Storage

(Controlled Atmosphere Storage, Multipurpose, Multi-Commodity Cold Storage, Food, Vegetables & Fruits Storage, Refrigerated Warehousing, Cold Chain, Industrial Cold Rooms, Warehouse & Rural Godowns for Short Term and Long Term Storage, Cold Storage with Ice Plant, Potato Powder, Flakes & Granules with Cold Storage, Cold Storage for Potatoes & Mahua)

Cold storage is basically a term used for refrigerated or frozen storage facilities, usually used to store food or pharmaceuticals.

Storage of food products under low temperatures using temperature and relative humidity controllers to maintain the desired conditions inside the cold rooms as well as ventilations systems to provide adequate storage conditions.

The term "cold storage" refers to the storing of goods in a refrigerated atmosphere. This means heat is removed from the storage container or room to help keep items — often food — fresh for delivery, long- or short-term storage, and so on. Cold storage helps prevent spoilage of foods and other items meant for consumption, and it can be used in a variety of other settings, such as hospitals, warehouses, and anywhere else that stores products in need of preservation. When transporting goods, refrigeration trucks are often used to keep items cold throughout the transportation process.
