## Cosmetics

Cosmetics are substances or products used to enhance or alter the appearance or fragrance of the body. Many cosmetics are designed for use of applying to the face and hair. They are generally mixtures of chemical compounds; some being derived from natural sources (such as coconut oil), and some being synthetics. Common cosmetics include lipstick, mascara, eye shadow, foundation, rouge, skin cleansers and skin lotions, shampoo, hairstyling products (gel, hair spray, etc.), perfume and cologne. Cosmetics applied to the face to enhance its appearance are often called make-up or makeup.

Cosmetic industry

The cosmetic industry is dominated by a small number of multinational corporations that originated in the early 20th century, but the distribution and sale of cosmetics is spread among a wide range of different businesses.

## Perfumery Compound

The word perfume used today derives from the Latin per fumum, meaning through smoke. Perfumery, or the art of making perfumes, began in ancient Mesopotamia and Egypt and was further refined by the Romans and Persians. Originally all the products used in perfumery were of natural origin. The finest modern perfumes are neither wholly synthetic nor yet completely natural. The demand is increasing day by day due to increase in the standard of living. The word perfume used today derives from the Latin per fumum, meaning through smoke.
