

# Global Countertop Demand is forecast to rise 2.3 percent yearly through 2021.

## Description:

### **Global Countertop Demand is forecast to rise 2.3% yearly through 2021: Manufacturing Business of Quartz Slabs, Engineered Stone, Composite Materials, Kitchen Countertops, Artificial Stone**

Quartz Surfaces a man-made product, comprises majorly of quartz, one of nature's strongest material and a mix of bonding agent, pigment and additives. Similar in appearance to natural stone, quartz enjoy certain innate benefits not available with natural material namely durability, strength and stain and heat resistant qualities. Further, natural stones are also porous which leaves room for bacteria to get into fissures and pores where it can be tough to eradicate, while on the other hand Engineered stone doesn't absorb liquids resulting in easier cleaning and more effective than natural stone. Engineered stone is also the fastest growing material to be used in the countertop industry. Rapid growth of the product has been driven by the material's superior physical attributes relative to other countertop materials, its attractive relative value, as well as broad array of colors and ease of fabrication. The growth is expected to remain strong as it gains further awareness and acceptance in several existing and newer markets - the product is fairly matured and developed in Israel and Australia, it is still at a nascent stage in markets like USA and Canada, two of the largest markets in the world.

Quartz is the most abundant mineral on Earth and one of the hardest, so it is "hardly" surprising that manufacturers saw its great potential for a surface material more than 50 years ago. Since that time, quartz countertops have grown in popularity as homeowners discovered what the earliest quartz pioneers knew - when the natural mineral quartz is improved upon by man's ingenuity, quartz countertops can compete with other natural stone countertops in every way.
