

Industrial Pollution Types, Effects and Control of Industrial Pollution

Description:

Industrial Pollution: Types, Effects and Control of Industrial Pollution (Cleaning and degreasing, cold cleaning, vapor cleaning, precision cleaning, refrigerant, nickel plating, chrome plating, cadmium and zinc plating, copper, gold, silver, and tin plating, techniques to reduce plating waste, electro dialysis, powder coating, electrostatic painting, rendering, scalding, motor oil and antifreeze, aluminium industry, chemical treatment, waste treatment)

Industrialization is the process of social and economic change that transforms a human group from a pre-industrial society into an industrial one. It is a part of a wider modernization process, where social change and economic development are closely related with technological innovation, particularly with the development of large scale energy and metallurgy production. Industrial pollution hurts the environment in a range of ways, and it has a negative impact on human lives and health. Pollutants can kill animals and plants, imbalance ecosystems, degrade air quality radically, damage buildings, and generally degrade quality of life. India is a home to many industries. The sectors include Iron and Steel, Pulp and Paper, Food Processing, Chemicals, Aluminium Industry, Cement, Pharmaceuticals, Machine tools, Surface finishing Industries etc. However, the industrial growth happening at a breakneck speed has resulted in a significant contribution to the toxicity in the environment. Therefore industrial activities should comply with regulatory norms for prevention and control of pollution. There have been many guidelines for the industries and the pollution caused by them.
