

# Excellent Investment Opportunities in Cold Storage

## Description:

India ranks first in the world in production of fruits and second in vegetables, accounting roughly 10 and 15 per cent, respectively, of total global production. India have a strong and dynamic food processing sector playing a vital role in diversifying the agricultural sector, improving value addition opportunities and creating surplus food for agro-food products.

Fruits and vegetables have a very short shelf life after harvest. In order to prevent post-harvest losses, they have to be processed immediately or stored under refrigerated conditions.

Cold Storages and Cold Chain are essential for extending the shelf life, period of marketing, avoiding glut, post-harvest losses reducing transport bottlenecks during peak period of production and maintenance of quality of produce. It is, therefore, necessary that cold storages are to be constructed in major producing as well as consuming centres. The development of cold storages in the country has an important role in reducing the wastages of the perishable commodities and providing remunerative prices to the growers and to make available farm products to the consumers at competitive and affordable prices.
