

# Food Additives, Colours and Food Flavours Industry

## Description:

Food colors are an important part of the food additives market. Food coloring, or color additive, is any dye, pigment or substance that imparts color when it is added to food or drink. They come in many forms consisting of liquids, powders, gels, and pastes. Food coloring is used both in commercial food production and in domestic cooking.

Being a part of the Global Food and Beverage Industry, food colors market has huge potential to grow in the emerging and developing economies such as India. Food & beverage manufacturers are resorting to natural and synthetic food colors to enhance the organoleptic appeal of the finished product.

The food colors market is growing with the increase in demand for food. The growth of the natural colors market segment depends on the consumers' preference for natural and healthy food colors. This growth will be maintained in the future with finding new sources of raw materials, the launch of new products, and using advanced technologies for color production.

The natural food flavors, by type, has been segmented into natural extracts, aroma chemicals, essential oils, and others which include spices and fermentation. The application segment of natural food flavors includes beverages, savory & snacks, bakery & confectionery, dairy & frozen, and others which include soups, salad, condiments, dressings, and sauces.
