

# Ghee Manufacturing Unit. Ghee Production Plant.

## Description:

Ghee is a clarified butter that has had its milk solids toasted then skimmed away from the fat, resulting in a product that combines oil's very high smoke point and butter's rich, nutty flavor and excellent nutritional profile.

Ghee has a nutty flavor and tastes more buttery than butter itself. It holds up to strong spices well, which is one reason it's a staple of Indian and Thai cooking. Ghee also pulls fat-soluble flavors and nutrients out of spices when you cook the two together. It's ideal for curries, sauces, and other slow-cooked or simmered dishes. It's also great drizzled over veggies with a bit of salt.

Ghee can be used in place of butter and is an ideal cooking oil, as it does not burn unless heated excessively. It makes a wonderful body oil for massage and can serve as a base for herbal ointments (for burns, skin rashes, etc.) and can even be used for lamps, with wicks made from cotton balls.

Ghee is a digestive. It helps to improve absorption and assimilation. It nourishes ojas, tejas and prana. It is good for improving memory and lubricates the connective tissue.

## Market Outlook

India is the world's largest producer and consumer of milk and dairy products. Ghee currently controls the second largest market share in terms of revenue in Indian market.

Ghee, which is widely used in Indian cooking, is the pure butter fat left over after the milk solids and water are removed from butter. It is very fragrant with a rich nutty taste and represents the second largest consumed dairy product in India, after liquid milk. The healthy growth of the market can be attributed to numerous forces. Population growth, rising disposable incomes, easy availability, and growing awareness about the benefits of ghee are some of the factors that are broadening the growth aspects of the market.
